3. Discussion of Police, Fire and Transportation Impact Fee studies.

LEGISLATIVE MEMORANDUM

TO: **Honorable Mayor and Members of the City Council**

FROM: **Suzanne Sherman, City Manager**

THRU: **City Manager's Office**

DATE: **August 13, 2024**

RE: **Discussion of Police, Fire and Transportation Impact Fee studies.**

SUMMARY:
The City conducted impact fee study updates for Police, Fire, and Transportation fees, all of which were presented to City Council in 2024. Stantec presented the Police and Fire review at the February 1, 2024, Regular Council meeting, and Benesch presented the Transportation impact fee update at the July 18, 2024 Regular Council meeting. Parks impact fees were originally proposed to be studied, but a decision was made to delay that work until the Parks Master Plan is completed.

Based on the needs of the City, all fees were recommended to be increased by the consultants. The transportation impact fee study was last updated in 2012, and the other fees were last updated in 2018.

Per F.S. 163.31801, any changes in these fees will require a minimum of a 90-day notice for any fee increases. Also, state law now provides a limit on fee increases, and requires that fees be increased in installments rather than all at once, based on certain percentage limits.

The attached Summary of Proposed Impact Fees shows the proposed changes to Transportation, Police, and Fire impact fees, and the four-year phase-in schedules, as applicable.

REQUESTING DEPARTMENTS:
City Manager's Office

FISCAL IMPACT:
None at this time.

STAFF RECOMMENDATION:

Motion to be determined by Council direction.

ATTACHMENTS:

1. Summary of Proposed Impact Fees
2. Benesch Transportation Impact Fee Presentation
3. Benesch Draft Impact Fee Report 2024
4. Stantec Police & Fire Impact Fee Presentation

The City of Palm Bay Florida

Transportation Impact Fee Update Study

July 18, 2024

benesch

Presentation Overview

Background/ Purpose

Technical Study

Next Steps

Background/Purpose

City of Palm Bay Demographics

- Continuing population growth
  - ✓ Annual population growth averages **3.72%** for the past five years
    - Higher than statewide average population growth rate of 1.66%
  - ✓ Over **27,000 additional residents** the past 10 years
  - ✓ **2,600** new housing units permitted per year over the past three years
- Impact Fee Study
  - ✓ Transportation impact fee last updated in 2012

Background/Purpose

Impact fee definition:

- One-time capital charge to new development
- Covers portion of capital costs of Infrastructure capacity
  - Frees up other funds for maintenance/renovations
- Implements the CIE

Background/Purpose

Why Impact Fees?

- Calculate the cost of growth
- Potential large developments
- Most needed when:
  - High growth
  - Limited funding

Legal Requirements

Legal Requirements - F.S. 163.31801:

- **Most recent and localized data**
- Minimum of **90-day** notice for any fee increases after adoption
- May not collect prior to building permit
- Rational nexus in the amount of collection and expenditures
- May not use for prior debt or projects unless there is a nexus showing use for need due to new growth
- **In any action challenging the fee, the government has the burden of proof**
- Accounting of impact fee collections & expenditures

Legal Requirements

HB 337 (2021):

- Limit on fee increases:
  - Up to 25% increase: Over 2 years
  - 25% to 50% increase: Over 4 installments
  - Cannot be increased more than 50%
  - Cannot be increased more than once every four years
- Exception:
  - A study within the past 12 months demonstrating extraordinary circumstances
  - Two public workshops to discuss the extraordinary circumstances
  - Increase to be approved by 2/3rd of the governing body

Presentation Overview

Background/ Purpose

Technical Study

Technical Study

Impact Fee Calculation

Technical Study

Consumption - Based Methodology

- Common methodology used by many Florida jurisdictions
- Charges new growth based on its consumption of capacity
- Fees are calculated at a rate that cannot correct existing deficiencies

Technical Study

Basic Impact Fee Formula

Net Transportation Impact Fee =

(Cost – Credit) x Demand

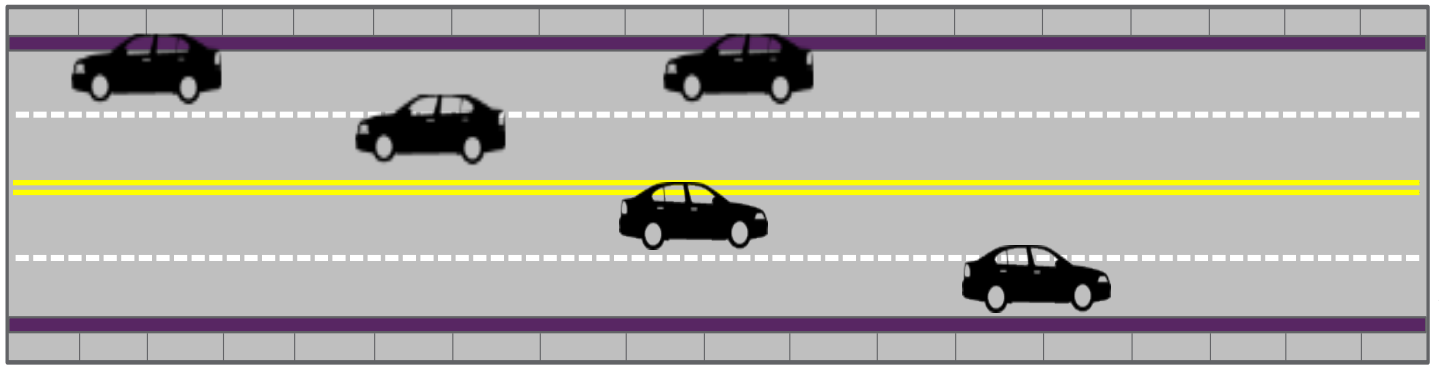
Cost to add capacity

Non-impact fee revenue from future development

Vehicle-Miles of Travel

Transportation Impact Fee: Consumption-Based

One Lane Mile ≈$4.9 M ÷ Capacity ≈9,700 = Vehicle-miles of capacity ≈$505



Total Credit ≈$700

Fee ≈$8,400

Total Impact Cost ≈$9,100 = 18 vehicle-miles of daily travel X

Transportation Impact Fee

Transportation Impact Fee

Cost Component

- City Roadway Improvements
  - ✓1 recently completed capacity improvement in City of Palm Bay
    - Culver Drive from Emerson Drive to Palm Bay Road = **$1.9 million per lane mile**
  - ✓7 future estimates
    - Range from $0.9 to $5.0 million per lane mile. Avg. = **$3.5 million per lane mile**
  - ✓All 8 projects combined: **$3.4 million per lane mile**
  - ✓46 capacity improvements from throughout Florida (2014-2023)
    - Weighted average construction cost = $3.7 million per lane mile
    - Projects in suburban/rural counties = **$3.1 million per lane mile**
  - ✓City/County Construction Cost = **$3.1 million per lane mile (urban design; curb & gutter)**

Transportation Impact Fee

Cost Component

- State Roadway Improvements
  - ✓1 recent capacity improvement in Brevard County (2023)
    - Galaxy Way from Kennedy Pkwy to Space Commerce Way = **$4.9 million per lane mile**
  - ✓62 recent capacity improvements from throughout Florida (2014-2023)
    - Weighted average construction cost = $4.2 million per lane mile
    - Projects in suburban/rural counties = **$4.2 million per lane mile**
  - ✓State Construction Cost = **$4.2 million per lane mile (urban design; curb & gutter)**

Transportation Impact Fee

Cost Component

- Open Drainage Adjustment
  - ✓Estimated at 73% of the curb & gutter costs (FDOT D7)
- City/County vs. State
  - ✓Based on distribution of improvements in the Space Coast TPO's 2045 Long Range Transportation Plan's Cost Feasible Plan (49% County, 51% State)

Transportation Impact Fee

City/County Roads

Phase*	Curb & Gutter (65%)	Open Drainage (35%)	Weighted Average
Design @11%	$341,000	$249,000	$309,000
Right-of-Way @35%	$1,085,000	$792,000	$982,000

City of Palm Bay
Transportation Impact Fee Update Study

Table of Contents

Introduction

The City of Palm Bay has been experiencing significant population growth, with over 20,000 additional residents over the past 10 years. The City's residential permitting levels exceeded 2,500 units in the past couple of years. To address growth-related infrastructure needs, the City of Palm Bay implemented several impact fees, including a transportation impact fee, which was last updated in 2012. To reflect the changes to the impact fee variables since then, the City of Palm Bay has retained Benesch to prepare an update study.

This report serves as the technical study to support the calculation of the updated impact fees. Data presented in this report represents the most recent and localized data available at the time of this update study. All data and support material used in this analysis are incorporated by reference as set forth in this document.

The figures calculated in this study represent the technically defensible level of impact fees that the City could charge; however, the City Council may choose to discount the fees as a policy decision.

Methodology

The methodology used for the transportation impact fee study is a consumption-based impact fee approach in which new development is charged based upon the proportion of vehicle-miles of travel (VMT) that each unit of new development is expected to consume of a lane-mile of the roadway network.

Under this methodology, the fees assess a proportionate share cost for the entire transportation network in the city, including classified City, County and State roadways, with the exception of local/neighborhood roads and interstate highways/toll facilities. Generally, neighborhood roads are the obligation of the developer and are part of the site/subdivision approvals. Toll facilities are funded by toll revenues through Florida Turnpike Enterprise or local toll authorities and interstate highways are funded with earmarked federal and statewide strategic intermodal systems funds and planned for at the state level with minimal local input and limited or no local funding.

Included in this document is the necessary support material used in the calculation of the transportation impact fee. The general equation used to compute the impact fee for a given land use is:

[Demand x Cost] – Credit = Fee

The "demand" for travel placed on a transportation system is expressed in units of Vehicle-Miles of Travel (daily vehicle-trip generation rate x the trip length x the percent new trips [of total trips]) for each land use contained in the impact fee schedule. Trip generation represents the average daily rates to provide a stable measure of new development's impact. The number of trips tends to vary significantly throughout the day by time of day depending on activity levels; however, overall daily trips tend to be stable.

The "cost" of building new capacity typically is expressed in units of dollars per vehicle-mile of transportation capacity.

The "credit" is an estimate of future non-impact fee revenues generated by new development that are allocated to provide roadway capacity expansion. The impact fee is considered to be an "up front" payment for a portion of the cost of building a vehicle-mile of capacity that is directly related to the amount of capacity consumed by each unit of land use, that is not paid for by future tax revenues generated by the new development activity. These credits are required under the supporting case law for the calculation of impact fees where a new development activity must be reasonably assured that they are not being charged twice for the same level of service.

The input variables used in the fee equation are as follows:

Demand Variables:

- Trip generation rate
- Trip length
- Percent new trips
- Interstate & toll facility adjustment factor

Cost Variables:

- Roadway cost per vehicle-mile
- Roadway capacity added per lane mile constructed

Credit Variables:

- Equivalent gas tax credit (pennies)
- Present worth
- Fuel efficiency
- Effective days per year

Legal Overview

In Florida, legal requirements related to impact fees have primarily been established through case law since the 1980's. Impact fees must comply with the "dual rational nexus" test, which requires that they:

- Be supported by a study demonstrating that the fees are proportionate in amount to the need created by new development paying the fee; and
- Be spent in a manner that directs a proportionate benefit to new development, typically accomplished through establishment of benefit districts (if needed) and a list of capacity-adding projects included in the City's Capital Improvement Plan, Capital Improvement Element, or another planning document/Master Plan.

In 2006, the Florida legislature passed the "Florida Impact Fee Act," which recognized impact fees as "an outgrowth of home rule power of a local government to provide certain services within its jurisdiction." § 163.31801(2), Fla. Stat. The statute – concerned with mostly procedural and methodological limitations – did not expressly allow or disallow any particular public facility type from being funded with impact fees. The Act did specify procedural and methodological prerequisites, such as the requirement of the fee being based on most recent and localized data, a 90-day requirement for fee changes, and other similar requirements, most of which were common to the practice already.

More recent legislation further affected the impact fee framework in Florida, including the following:

- **HB 227 in 2009:** The Florida legislation statutorily clarified that in any action challenging an impact fee, the government has the burden of proving by a preponderance of the evidence that the imposition or amount of the fee meets the requirements of state legal precedent or the Impact Fee Act and that the court may not use a deferential standard.
- **SB 360 in 2009:** Allowed fees to be decreased without the 90-day notice period required to increase the fees and purported to change the standard of legal review associated with impact fees. SB 360 also required the Florida Department of Community Affairs (now the

Department of Commerce) and Florida Department of Transportation (FDOT) to conduct studies on "mobility fees," which were completed in 2010.

- **HB 7207 in 2011:** Required a dollar-for-dollar credit, for purposes of concurrency compliance, for impact fees paid and other concurrency mitigation required.
- **HB 319 in 2013:** Applied mostly to concurrency management authorities, but also encouraged local governments to adopt alternative mobility systems using a series of tools identified in section 163.3180(5)(f), Florida Statutes, including:
    - Adoption of long-term strategies to facilitate development patterns that support multi-modal solutions, including urban design, and appropriate land use mixes, including intensity and density.
    - Adoption of an area-wide level of service not dependent on any single road segment function.
    - Exempting or discounting impacts of locally desired development, such as development in urban areas, redevelopment, job creation, and mixed use on the transportation system.
    - Assigning secondary priority to vehicle mobility and primary priority to ensuring a safe, comfortable, and attractive pedestrian environment, with convenient interconnection to transit.
    - Establishing multi-modal level of service standards that rely primarily on non-vehicular modes of transportation where existing or planned community design will provide adequate level of mobility.
    - Reducing impact fees or local access fees to promote development within urban areas, multi-modal transportation districts, and a balance of mixed-use development in certain areas or districts, or for affordable or workforce housing.

  Also, under HB 319, a mobility fee funding system expressly must comply with the dual rational nexus test applicable to traditional impact fees. Furthermore, any mobility fee revenues collected must be used to implement the local government's plan, which serves as the basis to demonstrate the need for the fee. Finally, under HB 319, an alternative mobility system, that is not mobility fee-based, must not impose upon new development any responsibility for funding an existing transportation deficiency.

- **HB 207 in 2019:** Included the following changes to the Impact Fee Act along with additional clarifying language:
    - Impact fees cannot be collected prior to building permit issuance; and

- Impact fee revenues cannot be used to pay debt service for previously approved projects unless the expenditure is reasonably connected to, or has a rational nexus with, the increased impact generated by the new residential and commercial construction.

- **HB 7103 in 2019:** Addressed multiple issues related to affordable housing/linkage fees, impact fees, and building services fees. In terms of impact fees, the bill required that when local governments increase their impact fees, the outstanding impact fee credits for developer contributions should also be increased. This requirement was to operate prospectively; however, HB 337 that was signed in 2021 deleted this clause and making all outstanding credits eligible for this adjustment. This bill also allowed local governments to waive/reduce impact fees for affordable housing projects without having to offset the associated revenue loss.
- **SB 1066 in 2020:** Added language allowing impact fee credits to be assignable and transferable at any time after establishment from one development or parcel to another that is within the same impact fee zone/district or that is within an adjoining impact fee zone/district within the same local government jurisdiction. In addition, added language indicating any new/increased impact fee not being applicable to current or pending permit applications submitted prior to the effective date of an ordinance or resolution imposing new/increased fees.
- **HB 1339 in 2020:** Requires reporting of various impact fee related data items within the annual financial audit report submitted to the Department of Financial Services.
- **HB 337 in 2021:** Placed limits on the amount and frequency of fee increases, but also included a clause to exceed these restrictions if the local governments can demonstrate extraordinary circumstances, hold two public workshops discussing these circumstances and the increases are approved by two-thirds of the governing body.
- **HB 479 in 2024 (Effective October 1, 2024):** Required interlocal agreements between counties and municipalities when both entities collect a transportation impact fee. Placed limits on timing of impact fee study completion and adoption and data used in the studies.

The following paragraphs provide further detail on the generally applicable legal standards.

<u>Impact Fee Definition</u>

- An impact fee is a one-time capital charge levied against new development.
- An impact fee is designed to cover the portion of the capital costs of infrastructure capacity consumed by new development.

- The principal purpose of an impact fee is to assist in funding the implementation of multi-modal transportation capacity addition projects identified in the Capital Improvements Element (CIE) and other capital improvement programs/plans.
- Examples of impact fee eligible projects include new road construction, lane addition projects, and turn lane additions/intersection improvements.

Impact Fee vs. Tax

- An impact fee is generally regarded as a regulatory function established based upon the specific benefit to the user related to a given infrastructure type and is not established for the primary purpose of generating revenue for the general benefit of the community, as are taxes.
- Impact fee expenditures must convey a proportional benefit to the fee payer. This is accomplished through the establishment of benefit districts, where fees collected in a benefit district are spent in the same benefit district.
- An impact fee must be tied to a proportional need for new infrastructure capacity created by new development.

This technical report has been prepared to support legal compliance with existing case law and statutory requirements.

Demand Component

Travel Demand

Travel demand is the amount of transportation system consumed by a unit of new land development activity. Demand is calculated using the following variables and is measured in terms of the vehicle-miles of new travel (VMT) that a unit of development consumes on the existing transportation system:

- Number of daily trips generated (Trip Generation Rate = TGR)
- Average length of those trips (Trip Length = TL)
- Proportion of travel that is new travel, rather than travel that is already on the transportation system and is captured by new development (Percent New Trips = PNT)

As part of this update, the trip characteristics variables were primarily obtained from two sources: (1) trip characteristics studies previously conducted throughout Florida (Florida Studies Database) and (2) the Institute of Transportation Engineers' (ITE) *Trip Generation Handbook* (11th Edition). The Florida Studies Database (included in Appendix A) was used to determine trip length, percent new trips, and the trip generation rate for several land uses.

Interstate & Toll Facility Adjustment Factor

This variable was used to recognize that interstate highway and toll facility improvements are funded by the State (specifically, the Florida Department of Transportation) using earmarked State and Federal funds or through toll revenues. Typically, impact fees are not used to pay for these improvements and the portion of travel occurring on the interstate/toll facility system is subtracted from the total travel for each use.

To calculate the interstate and toll (I/T) facility adjustment factor, the loaded highway network[1] file was generated for the Central Florida Regional Planning Model (CFRPM v7). A select zone analysis was run for all traffic analysis zones located within the City of Palm Bay in order to differentiate trips with an origin and/or destination within the city versus trips that simply passed through the city.

[1] The "loaded highway network" refers to the final travel demand model roadway network with traffic volumes assigned (or loaded) to each model roadway link

Currently, I-95 is the only interstate/toll facility going through Brevard County. Therefore, the limited access vehicle-miles of travel (Limited Access VMT) for trips with an origin and/or destination within the City of Palm Bay was calculated for I-95. Next, the total VMT was calculated for trips with an origin and/or destination within the City of Palm Bay for all roads, including limited access facilities.

The I/T adjustment factor of 31.6 percent was determined by dividing the total limited access VMT by the total City of Palm Bay VMT. The total city VMT reduced by this factor is representative of only the roadways that are eligible to be funded with transportation impact fee revenues. Appendix A, Table A-1 provides further detail on this calculation.

Land Use Changes

As part of this update study, the following land uses were revised/added to the City's fee schedule.

Single Family (Detached) Tiering

Currently, all single family development is charged the same rate. This study introduces a tiered fee schedule based on the square footage of the development.

Duplex

Land use removed. Duplex units will be charged under the "Multi-Family Housing" land use.

Multi-Family Re-Alignment

Consistent with the revised configuration published in ITE 11th Edition, the multi-family housing tiers were slightly adjusted to the following alignment:

- Low-rise, 1-3 stories (previously 1-2 stories)
- Mid/high-rise, 4+ stories (previously 3+ stories)

Hotel/Motel

While currently combined into a single use, this study provides separate rates for each.

General Office

Currently, this land use is separated into several tiers based on the square footage of the office development. ITE 11th Edition data indicates that office buildings generally have the same trip

generation per 1,000 square feet, regardless of size and therefore the tiering was removed for this update.

Medical/Dental Office

This land use was separated into two categories based on square footage (10,000 square feet or less vs greater than 10,000 square feet). This change reflects recent local studies that show smaller medical offices generating fewer trips than their larger counterparts.

Retail/Shopping Center

ITE 11th Edition re-aligned this land use into three distinct square footage ranges with different trip generation rates. For this update study, the existing retail/shopping center tiers have been re-aligned to match ITE 11th Edition.

Gas Station w/Convenience Store

Currently, The City of Palm Bay has a "Convenience" land use and a "Service Station" land use. Due to the increasing popularity of larger convenient stores, ITE 11th Edition has realigned these land uses to have the trip generation tiering tied to the square footage, not the number of pumps. This change is reflected in this update study.

Land Uses Added/Removed:

Single Family (Attached); added.
Senior Adult Housing – Detached (replaces "retirement home"); added.
Senior Adult Housing – Attached (replaces "retirement home"); added.
Recreational Community Center (replaces "Civic Center"); added.
Insurance; removed, limited data available.
Convenience; removed, overlaps with "Gas Station/Convenience Store" land use.
Hardware/Paint Store; removed, limited data available.
Building/Lumber Supply; removed, limited data available.
Coffee/Donut Shop w/Drive-Thru; added.
Coffee/Donut Shop w/Drive-Thru & No Indoor Seating; added.
General Aviation; removed, limited data available.

Cost Component

Cost information from the City of Palm Bay, Brevard County, and other counties in Florida was reviewed to develop a unit cost for all phases involved in the construction of one lane-mile of roadway capacity. Appendix B provides the data and other supporting information utilized in these analyses.

City/County Roadway Cost

This section examines the right-of-way (ROW), construction, and other cost components associated with city/county roads with respect to roadway capacity expansion improvements in the City of Palm Bay/Brevard County. In addition to local data, bid data for recently completed/ongoing projects and recent construction bid data from roadway projects throughout Florida were used to supplement the cost data for city/county roadway improvements. The cost for each roadway capacity project was separated into four components: design, right-of-way (ROW), construction, and construction engineering/inspection (CEI).

Design and CEI

Design costs for city/county roads were estimated at 11 percent of construction phase costs based on a review of other Florida jurisdictions. Additional detail is provided in Appendix B, Table B-2.

CEI costs for city/county roads were estimated at nine (9) percent of construction phase costs based on a review of other Florida jurisdictions. Additional detail is provided in Appendix B, Table B-7.

Right-of-Way

The ROW cost reflects the total cost of the acquisitions along a corridor that are necessary to have sufficient cross-section width to widen an existing road or, in the case of new construction, to build a new road. With only limited local data available, this factor was determined through a review of recent ROW-to-construction ratios seen in other jurisdictions throughout Florida, which average approximately 36 percent. For purposes of the transportation impact fee calculation, a **35 percent** ROW-to-construction factor was used for city/county roadways. Additional details are provided in Appendix B, Table B-3.

Construction Cost

A review of construction cost data for local city/county roadway capacity expansion projects included a recently completed improvement (Culver Drive from Emerson Drive to Palm Bay Road) with a construction cost of approximately $1.9 million per lane mile. Additionally, cost estimates for seven upcoming improvements were reviewed, ranging from $0.9 million to $5.0 million per lane mile. Altogether, the local improvements have a weighted average cost of approximately $3.4 million per lane mile. Additional details are provided in Appendix B, Table B-4.

In addition to local data, a review of recently completed or bid projects (from 2014 to 2023) throughout the state of Florida was conducted. As shown in Appendix B, Table B-5, a total of 46 projects from 15 different counties (including Brevard County) were identified with a weighted average cost of approximately $3.7 million per lane mile. From this dataset, the counties that are more suburban/rural in nature were separated and this subset of counties had a weighted average construction cost of $3.1 million per lane mile.

Based on this review and discussions with City of Palm Bay, the construction cost for city/county roads was estimated at **$3.1 million per lane mile** for use in the transportation impact fee calculation.

To determine the cost per lane mile city/county roads with rural-design (open drainage) characteristics the relationship between urban and rural-designed roadway costs from the FDOT District 7 Long Range Estimates (LRE)[2] was reviewed. Based on these cost estimates, the costs for rural roadways are estimated at approximately 73 percent of the costs for urban roadways. Additional detail is provided in Appendix B, Table B-1.

As shown in Table 1, a total cost of **$4.4 million per lane mile** for city/county roads was used in the transportation impact fee calculation.

[2] Similar data for FDOT District 5 was not available.

Table 1

Estimated Total Cost per Lane Mile for City/County Roads

Cost Phase	Cost per Lane Mile		
	Curb & Gutter (Urban) Design	Open Drainage (Rural) Design[5]	Weighted Average[6]
Design[1]	$341,000	$249,000	$309,000
Right-of-Way[2]	$1,085,000	$792,000	$982,000
Construction[3]	$3,100,000	$2,263,000	$2,807,000
CEI[4]	$279,000	$204,000	$253,000
Total Cost	**$4,805,000**	**$3,508,000**	**$4,351,000**
Lane Mile Distribution[7]	65%	35%	100%

1) Design is estimated at 11% of construction costs.
2) ROW is estimated at 35% of construction costs.
3) Source: Estimate based on a review of data in Appendix B, Tables B-4 and B-5
4) CEI is estimated at 9% of construction costs.
5) Rural design (open drainage) cost are estimated at 73% of the urban (curb & gutter) costs.
6) Lane mile distribution (Item 7) multiplied by the design, ROW, construction, and CEI phase costs by improvement type to develop a weighted average cost per lane mile
7) Source: Appendix B, Table B-4; Items (a) and (b)

Note: All figures rounded to nearest $000

State Roadway Cost

This section examines the right-of-way (ROW), construction, and other cost components associated with state roads with respect to roadway capacity expansion improvements in the City of Palm Bay. In addition to local data, bid data for recently completed/on-going projects and recent construction data from roadway projects throughout Florida were used to supplement the cost data for state roadway improvements. The cost for each roadway capacity project was separated into four components: design, right-of-way (ROW), construction, and construction engineering/inspection (CEI).

Design and CEI

Design costs for state roads were estimated at **11 percent** of construction phase costs based on a review of cost data from jurisdictions throughout Florida. Additional details are provided in Appendix B, Table B-2.

CEI costs for state roads were estimated at **11 percent** of construction phase costs based on a review of cost data from jurisdictions throughout Florida. Additional details are provided in Appendix B, Table B-7.

Right-of-Way

Given the lack of data on ROW costs for state roads in City of Palm Bay/Brevard County and based on experience in other jurisdictions, the ROW cost ratio calculation for city/county roads was also applied to state roads. Using this ROW-to-construction ratio of **35 percent**, the ROW cost for state roads is approximately $1.2 million per lane mile.

Construction

A review of recent state road capacity improvements in Brevard County identified one recent project (additional detail is included in Appendix B, Table B-6):

- Galaxy Way from Kennedy Pkwy to Space Commerce Way

This improvement had a weighted average cost of $4.9 million per lane mile. In addition to local data, a review of recently bid projects (from 2014 to 2023) throughout the state of Florida was conducted. As shown in Appendix B, Table B-6, a total of 63 projects from 30 different counties (including Brevard County) were identified with a weighted average cost of approximately $4.2 million per lane mile. From this dataset, the counties that are more suburban/rural in nature were separated and this subset of counties also had a weighted average construction cost of $4.2 million per lane mile.

Based on this review and discussions with the City of Palm Bay, the construction cost for state roads was estimated at **$4.2 million per lane mile** for use in the transportation impact fee calculation. Additional information is presented in Appendix B, Table B-6.

To determine the cost per lane mile for state roads with rural-design (open drainage) characteristics the relationship between urban and rural-designed roadway costs from the FDOT District 7 Long Range Estimates (LRE)[3] was reviewed. Based on these cost estimates, the costs for rural roadways are estimated at approximately 73 percent of the costs for urban roadways. Additional detail is provided in Appendix B, Table B-1.

As shown in Table 2, a total cost of **$5.5 million per lane mile** for state roads was used in the transportation impact fee calculation.

[3] Similar data for FDOT District 5 was not available

Table 2

Estimated Total Cost per Lane Mile for State Roads

Cost Phase	Cost per Lane Mile		
	Curb & Gutter (Urban) Design	Open Drainage (Rural) Design[5]	Weighted Average[6]
Design[1]	$462,000	$337,000	$388,000
Right-of-Way[2]	$1,470,000	$1,073,000	$1,236,000
Construction[3]	$4,200,000	$3,066,000	$3,531,000
CEI[4]	$462,000	$337,000	$388,000

Summary of Costs (Blended Cost Analysis)

The weighted average cost per lane mile for city/county and state roads is presented in Table 3. The resulting weighted average cost of approximately $5.0 million per lane mile was utilized as the roadway cost input in the calculation of the transportation impact fees. The weighted average cost per lane mile includes city/county and state roads and is based on the distribution of future lane miles for the capacity improvements in the Space Coast TPO's 2045 Long Range Transportation Plan.

Table 3

Estimated Cost per Lane Mile for City/County & State Roads

Cost Type	City/County Roads[1]	State Roads[2]	City/County and State Roads[3]
Design	$309,000	$388,000	$349,000
Right-of-Way	$982,000	$1,236,000	$1,112,000
Construction	$2,807,000	$3,531,000	$3,176,000
CEI	$253,000	$388,000	$322,000
Total	**$4,351,000**	**$5,543,000**	**$4,959,000**
Lane Mile Distribution[4]	49%	51%	100%

Note: All figures rounded to nearest $000

Vehicle-Miles of Capacity per Lane Mile

An additional component of the transportation impact fee equation is the capacity added per lane-mile of roadway constructed. The vehicle-miles of capacity (VMC) is an estimate of capacity added per lane mile for city, county and state roadway improvements in the 2045 Long Range Transportation Plan. As shown in Table 4, each lane mile will add approximately 9,700 VMC.

Table 4

Weighted Average Vehicle-Miles of Capacity per Lane Mile

Source	Lane Mile Added[1]	Vehicle-Miles of Capacity Added[1]	VMC Added per Lane Mile[2]
City/County Roads	62.30	571,002	9,200
State Roads	64.64	657,288	10,200
Total	**126.94**	**1,228,290**	**9,700**

1) Source: Appendix B, Table B-8
2) Vehicle-miles of capacity added divided by lane miles added (rounded to 100)

Cost per Vehicle-Mile of Capacity

The transportation cost per unit of development is assessed based on the cost per vehicle-mile of capacity. As shown in Tables 3 and 4, the cost and capacity for roadways in the City of Palm Bay have been calculated based on typical roadway improvements planned to be constructed in the future. As presented in Table 5, the cost for travel within the city is approximately $511 per VMC.

The cost per VMC figure is used in the transportation impact fee calculation to determine the total cost per unit of development based on vehicle-miles of travel consumed. For each vehicle-mile of travel that is added to the roadway system, approximately $511 of transportation capacity is consumed.

Table 5

Weighted Average Cost per Vehicle-Mile of Capacity Added

Source	Cost per Lane Mile[1]	Average VMC Added per Lane Mile[2]	Cost per VMC[3]
City/County Roads	$4,351,000	9,200	$472.93
State Roads	$5,543,000	10,200	$543.43
Weighted Average	**$4,959,000**	**9,700**	**$511.24**

2) Source: Table 4
3) Cost per lane mile (Item 1) divided by the average VMC added per lane mile (Item 2)

Credit Component

Capital Improvement Credit

The credit component of the impact fee accounts for the existing City, County, and State revenue sources that are being used to fund roadway capacity expansion projects (excluding impact fee funds). This section summarizes the credit calculations that account for non-impact fee contributions. Additional details are provided in Appendix C.

The present value of the non-impact fee revenues generated by new development over a 25-year period that is expected to fund capacity expansion projects was credited against the cost of the system consumed by travel associated with new development. In order to provide a connection to the demand component, which is measured in terms of travel, the non-impact fee dollars were converted to a fuel tax equivalency.

City Credit

The City of Palm Bay is using local option gas tax revenues to retire debt service on bond proceeds used to fund transportation capacity expansion improvements. A total impact fee credit of approximately 0.2 pennies was calculated for debt service associated with transportation improvements. Additional details are provided in Appendix C, Table C-2.

County Credit

A review of Brevard County's FY 2024 Proposed Budget's Capital Improvement Plan indicated a combination of impact fees, fuel tax and grant revenues being used to fund transportation capacity expansion. Based on this review, Brevard County allocates an equivalent of 2.0 pennies for the portion of non-impact fee revenues dedicated to transportation capacity expansion improvements. Additional details are provided in Appendix C, Table C-3.

Additionally, the County is using non-impact fee revenues to retire debt service used to fund transportation capacity expansion improvements. A total impact fee credit of approximately 0.9 pennies was calculated for debt service associated with transportation improvements. Further detail is provided in Appendix C, Table C-4.

State Credit

As shown in Table 6, state expenditures for transportation capacity projects in Brevard County were reviewed and a credit for the capacity-expansion portion attributable to state projects was

estimated (excluding expenditures on limited access facilities). This review, which included 10 years of historical expenditures, as well as five (5) years of planned expenditures, indicated that FDOT's transportation capacity spending averages $21.8 million per year and generates a credit of 5.2 pennies of equivalent gas tax revenue, annually. The use of a 15-year period for developing a state credit accounts for the volatility in FDOT spending in the given area over short time periods. Additional details are provided in Appendix C, Table C-5.

As presented in Table 6, for transportation capacity projects, the City of Palm Bay allocates 0.2 pennies and Brevard County allocates 2.9 pennies (including debt service), while the State spends an average of 5.2 pennies, annually. The portion of capital improvement funding included in the transportation impact fee equation for credit calculations recognizes the future capital revenue that is expected to be generated by new development from all non-impact fee revenues. This credit does not include revenues generated by the existing population.

Table 6

Equivalent Pennies of Gas Tax Revenue

Credit	Average Annual Expenditures	Value per Penny[5]	Equivalent Pennies per Gallon[6]
Palm Bay Debt Service[1]	$758,952	$4,216,257	$0.002
County Revenues[2]	$8,566,238	$4,216,257	$0.020
County Debt Service[3]	$3,906,185	$4,216,257	$0.009
State Revenues[4]	$21,763,766	$4,216,257	$0.052
Total	**$34,995,141**		**$0.083**

4) Source: Appendix C, Table C-5
5) Source: Appendix C, Table C-1
6) Average annual expenditures divided by the value per penny (Item 5) divided by 100

Present Worth Variables

- Facility Life: The roadway facility life used in the impact fee analysis is 25 years, which represents the reasonable life of a roadway prior to significant maintenance needs.

- Interest Rate: This is the discount rate at which gasoline tax revenues might be bonded. It is used to compute the present value of the gasoline taxes generated by new development.

The discount rate of 4.00 percent was used in the impact fee calculation based on interest rates on recent bonds issued by the City of Palm Bay.

Fuel Efficiency

The fuel efficiency (i.e., the average miles traveled per gallon of fuel consumed) of the fleet of motor vehicles was estimated using the quantity of gasoline consumed by travel associated with a particular land use.

Appendix C, Table C-10 documents the calculation of fuel efficiency value based on the following equation, where "VMT" is vehicle miles of travel and "MPG" is fuel efficiency in terms of miles per gallon.

$$Fuel\ Efficiency = \sum VMT_{Roadway\ Type} \div \sum \left(\frac{VMT_{Vehicle\ Type}}{MPG_{Vehicle\ Type}} \right)_{Roadway\ Type}$$

The methodology uses non-interstate VMT and average fuel efficiency data for passenger vehicles (i.e., passenger cars and other 2-axle, 4-tire vehicles, such as vans, pickups, and SUVs) and large trucks (i.e., single-unit, 2-axle, 6-tire or more trucks and combination trucks) to calculate the total gallons of fuel used by each of these vehicle types.

The combined total VMT for the vehicle types is then divided by the combined total gallons of fuel consumed to calculate, in effect, a "weighted" fuel efficiency value that reflects the existing fleet mix of traffic on non-interstate roadways. The VMT and average fuel efficiency data were obtained from the most recent Federal Highway Administration's *Highway Statistics 2022*. Based on the calculation completed in Appendix C, Table C-10, the fuel efficiency rate to be used in the updated impact fee equation is 19.47 miles per gallon.

Effective Days per Year

An effective 365 days per year of operation was used for all land uses in the proposed fee. However, this will not be the case for all land uses since some uses operate only on weekdays (e.g., office buildings) and/or only seasonally (e.g., schools). The use of 365 days per year, therefore, provides a conservative estimate, ensuring that non-impact fee contributions are adequately credited against the fee.

Calculated Transportation Impact Fee Schedule

Detailed impact fee calculations for each land use are presented in Appendix D, which includes the major land use categories and the impact fees for the individual land uses contained in each of the major categories. For each land use, Appendix D, Table D-1 illustrates the following:

- Demand component variables (trip rate, trip length, and percent of new trips);
- Total impact fee cost;
- Annual capital improvement credit;
- Present value of the capital improvement credit; and
- Net transportation impact fee.

It should be noted that the net impact fees presented in Appendix D is not necessarily a recommended fee, but instead represents the technically calculated transportation impact fees per unit of land use that could be charged in the City of Palm Bay.

For clarification purposes, it may be useful to walk through the calculation of a transportation impact fee for one of the land use categories. In the following example, the net transportation impact fee is calculated for the mid-size single-family residential detached land use category (ITE LUC 210) using information from the impact fee schedules included in Appendix D. For each land use category, the following equations are utilized to calculate the net impact fee:

Net Transportation Impact Fee = Total Impact Cost – Capital Improvement Credit

Where:

Total Transportation Impact Cost = ([Trip Rate × Adjusted Trip Length × % New Trips] / 2) × (1 – Interstate/Toll Facility Adjustment Factor) × (Cost per Vehicle-Mile of Capacity)

Capital Improvement Credit = Present Value (Annual Capital Improvement Credit), given 4.00% interest rate & a 25-year facility life

Annual Capital Improvement Credit = ([Trip Rate × Total Trip Length × % New Trips] / 2) × (Effective Days per Year × $/Gallon to Capital) / Fuel Efficiency

Each of the inputs has been discussed previously in this document; however, for purposes of this example, brief definitions for each input are provided in the following paragraphs, along with the actual inputs used in the calculation of the fee for the single-family detached residential land use category (2,000 square feet):

- *Trip Rate* = the average daily trip generation rate, in vehicle-trips/day (7.81)
- *Assessable Trip Length* = the average trip length on collector roads or above, for the category, in vehicle-miles (6.62)
- *Total Trip Length* = the assessable trip length plus an adjustment factor of half a mile, which is added to the trip length to account for the fact that gas taxes are collected for travel on all roads including local roads (6.62 + 0.50 = 7.12)
- *% New Trips* = adjustment factor to account for trips that are already on the roadway (100%)
- *Divide by 2* = the total daily miles of travel generated by a particular category (i.e., rate*length*% new trips) is divided by two to prevent the double-counting of travel generated between two land use codes since every trip has an origin and a destination
- *Interstate/Toll Facility Adjustment Factor* = discount factor to account for travel demand occurring on interstate highways and/or toll facilities (31.6%)
- *Cost per Lane* Mile = unit cost to construct one lane mile of roadway, in $/lane-mile ($4,959,000)
- *Average Vehicle-Capacity Added per Lane* Mile = represents the average daily vehicle-traffic on one travel lane at capacity for one lane mile of roadway, in vehicle/lane-mile/day (9,700)
- *Cost per Vehicle-Mile of Capacity* = unit of vehicle-miles of capacity consumed per unit of development. Cost per vehicle-mile divided by average capacity added per lane mile ($511.24)
- *Present Value* = calculation of the present value of a uniform series of cash flows, gas tax payments in this case, given an interest rate, “i,” and a number of periods, “n;” for 4.00% interest and a 25-year facility life, the uniform series present worth factor is 15.6221
- *Effective Days per Year* = 365 days
- *$/Gallon to Capital* = the amount of equivalent gas tax revenue per gallon of fuel that is used for capital improvements, in $/gallon ($0.083)
- *Fuel Efficiency* = average fuel efficiency of vehicles, in vehicle-miles/gallon (19.47)

Transportation Impact Fee Calculation

Using these inputs, a net impact fee can be calculated for the single-family residential detached (2,000 sf) land use category as follows:

Transportation Impact Fee:

Total Impact Cost = ([7.81 * 6.62 * 1.0] /2) * (1 - 0.316) * ($511.24) = **$9,040**

Annual Cap. Improv. Credit = ([7.81 * 7.12 * 1.0] /2) * 365 * ($0.083 /19.47) = $43
Capital Improvement Credit = $43 * 15.6221 = **$672**

Net Impact Fee = $9,040 – $672 = **$8,368**

Table 7 presents the full calculated impact fee schedule with rate caps and phasing implemented, consistent with F.S. 163.31801 guidelines.

Table 7

Calculated Transportation Impact Fee with Phasing

ITE LUC	Land Use	Unit	Current Adopted Impact Fee	Calculated Impact Fee	% Change	Max Allowable F.S. 163.31801	Phase I	Phase II	Phase III	Phase IV
	RESIDENTIAL:									
210	Single Family (Detached) - Less than 1,500 sf	du	$4,353	**$6,892**	58%	$6,529	$4,897	$5,441	$5,985	$6,529

*The current fee for golf course is an estimated equivalent “per hole” rate due to the unit of measure change from “per acre” to “per hole”

Transportation Impact Fee Comparison

Table 8 presents the calculated transportation impact fee rates for the City of Palm Bay compared to transportation impact fee rates adopted by surrounding and other jurisdictions in Florida.

Note that differences in fee levels for a given land use can be caused by several factors, including the year of the technical study, adoption percentage, study methodology including variation in costs, credits, and travel demand, land use categories included in the fee schedule, etc. In addition, in some cases when both the County and City collect a transportation impact fee, fee amounts adopted by the Cities may reflect the portion of the fee associated with the City roads only.

6) Source: City of Palm Bay Growth Management Division
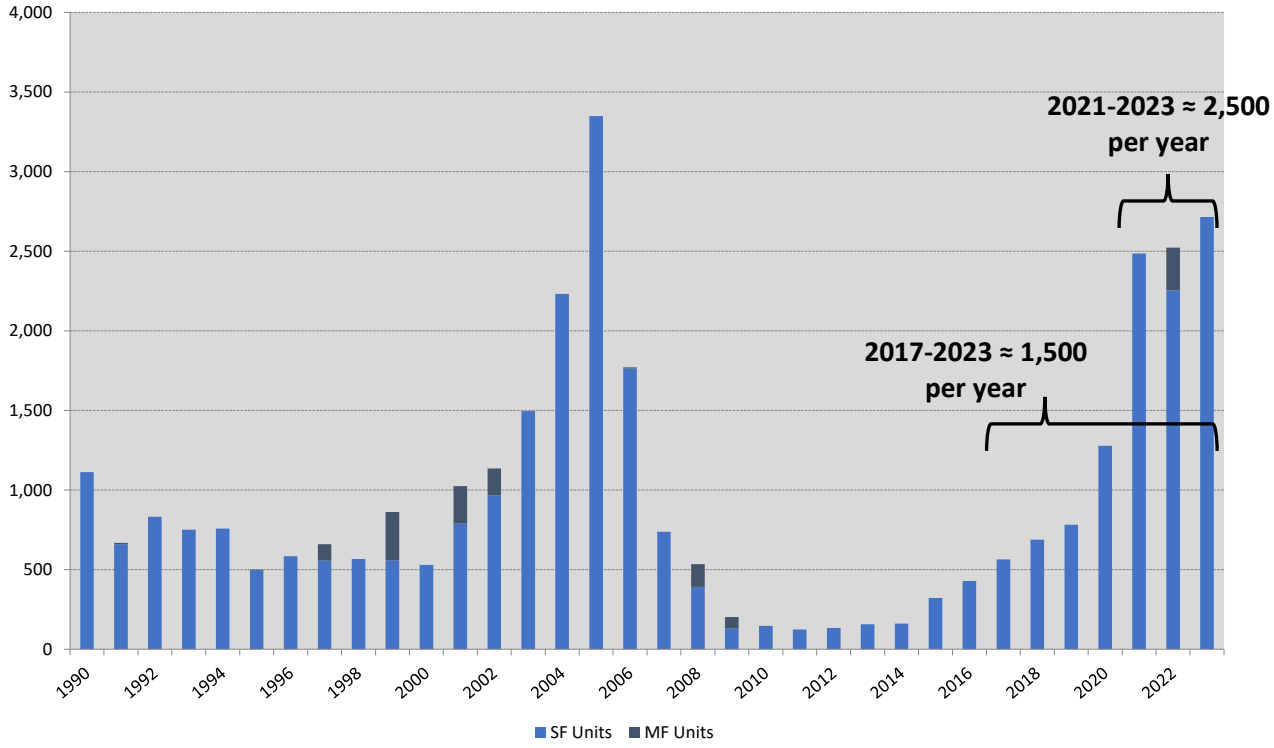
7) Source: City of Orlando Building and Development Department
8) Source: Brevard County Planning & Development Department. Unincorporated County rates are shown.
9) Source: Volusia County Growth and Resource Management Department
10) Source: Orange County Planning Division. Fees shown reflect annual indexing applied since adoption.
11) Source: St. Lucie County Administration Department; Innovation and Performance Division. Rates shown were adopted in compliance with the 50% limit pr F.S. 163.31801. Due to this compliance, the adoption rate varies by land use. For the Single Family (2,000 sf) land use, the current adopted rate is approximately 63% of the full calculated rate from the 2022 update study.
12) Source: Indian River County Planning Division. Fees for residential land uses are adopted at 75% and for non-residential at 45%

Revenue Projections

The transportation impact fee projections in this report are based on recent permitting levels in the City of Palm Bay. As shown in Figure 1, the City of Palm Bay has experienced a significant increase in residential permitting over the past two to three years. Figure 1 presents residential permitting trends since 1990s.

Figure 1
Residential Permitting



Source: U.S. Census Bureau

Given fluctuations in permitting levels, a range of projects scenarios was developed. For the low-end, residential permitting was based on the average permitting levels since 2017 (approximately 1,500 permits) and for the high-end, residential permitting was based on average permitting levels of the last three years (approximately 2,500 permits).

Additional assumptions/estimates reflected in the projections:

- Impact fees phased-in to maximum allowable rates over four years;
- Residential permitting is primarily for the "Single Family Detached" land use;

- Non-residential revenues account for approximately 20 percent of the total revenue collected. This estimate is based on the average tax base distribution in the City of Palm Bay over the past five years; and
- Revenue estimates adjusted down approximately 30 percent to account for developer credits and other reductions based on revenue levels of recent years.

As shown in Table 8, the City of Palm Bay has the potential to generate between $44 million and $74 million in transportation impact fee revenues over the next five years. These projections reflect the calculated rates being phased-in to their maximum allowable rates over four years.

Table 8

Transportation Impact Fee Revenue Projections

Service Area	Annual Revenue (Low-End)	Annual Revenue (High-End)	2025-2030 Revenues (Low-End)	2025-2030 Revenues (High-End)
Transportation	$7,390,000	$12,320,000	**$44,340,000**	**$73,920,000**

Source: Based on recent residential permitting levels and calculated fee rates from this report

For impact fee purposes, revenue projections serve only as an overall guideline in planning future infrastructure needs. In their simplest form, impact fees charge each unit of new growth for the net cost (total cost less credits) of infrastructure needed to serve that unit of growth. If the growth rates remain high, the City will have more impact fee revenues to fund growth related projects sooner rather than later. If the growth rate slows down, less revenue will be generated and the timing and need for future infrastructure improvements will be later rather than sooner.

Appendix A:
Demand Component

Appendix A: Demand Component

This appendix presents the detailed calculations for the demand component of the transportation impact fee study.

Interstate & Toll Facility Adjustment Factor

Table A-1 presents the interstate and toll facility adjustment factor used in the calculation of the road impact fee. This variable is based on data from the Central Florida Regional Planning Model v7), specifically the 2045 projected vehicle-miles of travel of all city-generated trips on all in-county roadways. It should be noted that the adjustment factor excludes all external-to-external trips, which represent traffic that goes through the City of Palm Bay but does not necessarily stop in the city. This traffic is excluded from the analysis since it does not come from development within the city. The I/T adjustment factor is used to reduce the VMT that the impact fee charges for each land use.

Table A-1
Interstate/Toll Facility Adjustment Factor

Facility Type	Total	
	VMT	%
Interstate/Toll	1,184,684	**31.6%**
Other Roads	2,569,029	68.4%
Total	**3,753,713**	**100.0%**

Source: Central Florida Regional Planning Model v7

Florida Studies Trip Characteristics Database

The Florida Studies Trip Characteristics Database includes approximately 345 studies on 40 different residential and non-residential land uses collected over the last 30 years. Data from these studies include trip generation, trip length, and percent new trips for each land use. This information has been used in the development of impact/multi-modal/mobility fees for communities throughout Florida and the U.S.

Benesch estimates trip generation rates for all land uses in an impact fee schedule using data from studies in the Florida Studies Database and the Institute of Transportation Engineers' (ITE) *Trip Generation* reference report (11th edition). In instances, when both ITE *Trip Generation* reference report (11th edition) and Florida Studies trip generation rate (TGR) data are available for a particular land use, the data is typically blended together to increase the sample size and

provide a more valid estimate of the average number of trips generated per unit of development. If no Florida Studies data is available, only TGR data from the ITE reference report is used in the fee calculation.

The trip generation rate for each respective land use is calculated using machine counts that record daily traffic into and out of the site studied. The traffic count hoses or video cameras are set at entrances to residential subdivisions for the residential land uses and at all access points for non-residential land uses.

The trip length information is obtained through origin-destination surveys that ask respondents where they came from prior to arriving at the site and where they intended to go after leaving the site. The results of these surveys were used to estimate average trip length by land use.

The percent new trip variable is based on assigning each trip collected through the origin-destination survey process a trip type (primary, secondary, diverted, and captured). The percent new trip variable is then calculated as 1 minus the percentage of trips that are captured. Benesch has published an article entitled, *Measuring Travel Characteristics for Transportation Impact Fees*, ITE Journal, April 1991, on the data collection methodology for trip characteristics studies.

Residential Trip Generation Rate Tiering

Single Family Detached

As part of this study, the single family residential trip generation rate tiering was included to reflect a three-tier analysis to ensure equity by the size of a home. To facilitate this, an analysis was completed on the comparative relationship between housing size and household travel behavior. This analysis utilized data from the 2022 National Household Travel Survey (NHTS) and the 2021 American Housing Survey (AHS) to examine overall trip-making characteristics of households in the United States.

Table A-28 presents that trip characteristics being utilized in the calculated transportation impact fee schedule for the single family (detached) land use. The 2022 NHTS database was used to assess average annual household vehicle miles of travel (VMT) for various annual household income levels. In addition, the 2021 AHS database was used to compare median annual family/household incomes with housing unit sizes. It is important to recognize that the use of the income variable in each of these databases is simply to provide a convenient linking mechanism between household VMT from the NHTS and housing unit size from the AHS.

Table A-28

Calculated Single Family (Detached) Trip Characteristics

Calculated Values Excluding Tiering	Trip Rate	Assessable Trip Length	Daily VMT
Single Family (Detached)	7.81	6.62	51.70

Source: Table A-3

The results of the NHTS and AHS analyses are included in Tables A-29 and A-30. First, the data shown in Table A-29 indicates that the average income in the U.S. for families/households living in housing units between 1,500 and 2,499 sq ft in size ($74,416) is higher than the overall average income for the U.S. ($66,289). In Table A-30, the annual average household VMT was calculated from the NHTS database for several different income levels and ranges related to the resulting AHS income data from Table A-29.

Table A-29

Annual Income by Housing Size

2021 AHS Average Income Data by Housing Size	Annual Income[(1)]
Less than 1,500 sf	$51,697
1,500 to 2,499 sf	$74,416
2,500 sf or more	$90,699
Average of All Houses	$66,289

Source: American Housing Survey for the United States in 2021

1) Weighted average of annual income for each tier

Table A-30

NHTS VMT Annual VMT by Income Category

2022 NHTS Travel Data by Annual HH Income	Annual VMT/HH	Days	Daily VMT	Ratio to Mean	Normalized to 1.061
Total (All Homes)	15,545	365	42.59	1.000	-
Average of $51,697	13,594	365	37.24	0.874	0.824
Average of $74,416	16,496	365	45.19	1.061	1.000
Average of $90,699	18,138	365	49.69	1.167	1.100

Source: 2022 National Household Travel Survey Database, Federal Highway Administration

To calculate a corresponding trip rate for the new tiers it was necessary to rely on comparative ratios. As an example, consider the $51,697 annual income category. First, it was determined that the average annual household VMT for this income level is 13,594 miles. This figure was then compared to the overall average annual VMT per household in the U.S. and normalized to the average of the $74,416 (16,496 miles) category to derive a ratio of 0.824.

Next, the normalized ratio was applied to the daily VMT for the average single family housing unit size (less than 1,500 sq ft) to generate a daily VMT of 42.60 for the tier, as shown in Table A-31. This daily VMT figure was then divided by the proposed assessable trip length of 6.62 miles to obtain a trip generation rate of 6.44 trips per day.

Table A-31

Trip Generation Rate by Single Family (Detached) Land Use Tier

Estimation of Trip Rate by Tier	Trip Rate[(1)]	Assessable Trip Length[(2)]	Daily VMT[(3)]	Ratio to Mean[(4)]
Single Family (Detached)				
Less than 1,500 sf	**6.44**	6.62	42.60	0.824
1,500 to 2,499 sf	**7.81**	6.62	51.70	1.000
2,500 sf or larger	**8.59**	6.62	56.87	1.100

1) Daily VMT (Item 3) divided by assessable trip length (Item 2) for each tier
2) Source: Table A-28
3) Ratio to the mean (Item 4) multiplied by the total daily VMT for the 1,500 to 2,499 sq tier
4) Source: Table A-30

Table A-32 illustrates the impact that the trip generation rate tiers for the single family (detached) land use have on the City's calculated transportation impact fee rate.

Table A-32

Net Impact Fee by Single Family (Detached) Land Use Tier

Impact of Tiering on Fee Schedule	Trip Rate[(1)]	Assessable Trip Length[(2)]	Daily VMT[(3)]	Net Fee[(4)]
Single Family (Detached)				
Less than 1,500 sf	**6.44**	6.62	42.60	**$6,892**
1,500 to 2,499 sf	**7.81**	6.62	51.70	**$8,368**

Appendix B:
Cost Component

Appendix B: Cost Component

This appendix presents the detailed calculations for the cost component of the transportation impact fee update. Supporting data and estimates are provided for all cost variables, including:

- Design
- Right-of-Way
- Construction
- Construction engineering/inspection

Urban-Design vs. Rural-Design

Due to limited construction data for roadways with rural-design (open drainage) characteristics, the cost per lane mile for these types of roads was calculated using an adjustment factor. This factor was based on the rural-to-urban (curb & gutter) cost ratio from the most recent District 7 Long Range Estimates (LRE) provided by FDOT[4]. As shown in Table B-1, the cost for rural-design roadway capacity expansion (new road construction or lane addition) is approximately 73 percent of the construction costs for urban-design roadway improvements.

Table B-1
Urban/Rural-Design Cost Factor

Improvement	Construction Cost per Lane Mile		
	Open Drainage Rural Design	Curb & Gutter Urban Design	Ratio
0-2 Lanes	$4,811,069	$7,492,440	64%
0-4 Lanes	$3,925,297	$5,235,679	75%
0-6 Lanes	$3,340,793	$4,244,073	79%
2-4 Lanes	$5,660,879	$7,333,052	77%
4-6 Lanes	$5,909,730	$7,926,966	75%
Average	**$4,729,553**	**$6,446,442**	**73%**

Source: FDOT District 7 Long Range Estimates, 2023

[4] Similar data for FDOT District 5 was not available.

Design

City/County Roadways

The design cost factor for city/county roads is estimated as a percentage of the construction cost per lane mile. This factor is determined based on a review of design-to-construction cost ratios from other jurisdictions throughout Florida. As shown in Table B-2, the design factors ranged from six (6) percent to 14 percent with a weighted average of 11 percent. For purposes of this study, the design cost for city/county roads is estimated at 11 percent of the construction cost per lane mile.

State Roadways

The design cost factor for state roads is estimated as a percentage of the construction cost per lane mile. This factor is determined based on a review of design-to-construction cost ratios from other jurisdictions throughout Florida. As shown in Table B-2, the design factors ranged from 10 percent to 11 percent with a weighted average of 11 percent. For purposes of this study, the design cost for state roads is estimated at 11 percent of the construction cost per lane mile.

Table B-2

Design Cost Factor for City/County & State Roads – Other Florida Jurisdictions

Year	County	County Roadways (Cost per Lane Mile)			State Roadways (Cost per Lane Mile)		
		Design	Constr.	Design Ratio	Design	Constr.	Design Ratio

Source: Each respective County

Right-of-Way

The ROW cost reflects the total cost of the acquisitions along a corridor that was necessary to have sufficient cross-section width to widen an existing road or, in the case of new road construction, build a new road.

City/County Roadways

For impact fee purposes, the ROW cost for city/county roads is estimated as a percentage of the construction cost per lane mile. To determine the ROW cost factor, Benesch conducted a review of ROW-to-construction cost ratios from other counties in Florida. As shown in Table B-3, the ROW-to-construction factor for other jurisdictions in Florida ranged from 10 percent to 60 percent with an average of 36 percent.

Based on a review of this data set and discussions with City of Palm Bay representatives, ROW costs were estimated at approximately 35 percent of the construction costs.

State Roadways

Similar to city/county roads, the ROW cost for state roads was estimated as a percentage of the construction cost per lane mile. As shown in Table B-3, the ROW-to-construction factor for state roads in other jurisdictions ranged from 20 percent to 60 percent with a weighted average of 41 percent.

Based on a review of this data set and discussions with the City of Palm Bay, it was estimated that the city/county factor of 35 percent of construction would also be representative of the ROW cost for state roads.

Table B-3

Right-of-Way Cost Factor for City/County & State Roads – Other Florida Jurisdictions

Year	County	County Roadways (Cost per Lane Mile)			State Roadways (Cost per Lane Mile)		
		ROW	Constr.	ROW Ratio	ROW	Constr.	ROW Ratio

Construction

City/County Roadways

A review of construction cost data for local city/county roadway capacity expansion projects included one recently completed improvement and seven future estimates in the City of Palm Bay, as shown in Table B-4.

- Culver Drive from Emerson Drive to Palm Bay Road (completed)
- St. Johns Heritage Parkway from Malabar Road to City Limits
- Babcock Street from Malabar Road to Waco Boulevard
- Emerson Drive from Jupiter Boulevard to St. Johns Heritage Parkway
- San Filippo Drive from Jupiter Boulevard to Foundation Park
- Malabar Road from Emerson Drive to Wal-Mart
- Minton Road from Malabar Road to Jupiter Boulevard
- Osmosis Drive form DeGroodt Road to eastern terminus

The construction cost of these improvements ranged from $0.9 million per lane mile to $5.0 million per lane mile with a weighted average construction cost of approximately $3.45 million per lane mile.

In addition to local data, a review of recently bid projects (from 2014 to 2023) throughout the state of Florida was conducted. As shown in Table D-5, a total of 46 projects from 14 different counties (including Brevard County) were identified with a weighted average cost of approximately $3.73 million per lane mile. Of these, when 30 suburban counties were considered, the construction cost averaged $3.13 million per lane mile.

Based on this review, the construction cost for city/county roads (urban design; curb & gutter) was estimated at $3.10 million per lane mile for use in the transportation impact fee calculation.

Table B-4

Source: Data obtained from each respective county (Building and Public Works Departments

State Roadways

A review of construction cost data for local state roadway capacity expansion projects included one recent improvement identified in Brevard County, as shown in Table B-6.

- Galaxy Way from Kennedy Parkway to Space Commerce Way

This improvement was bid with an estimated construction cost of approximately $4.90 million per lane mile.

In addition to local data, a review of recently bid projects (from 2014 to 2023) throughout the state of Florida was conducted. As shown in Table B-6, a total of 43 projects from 30 different suburban counties (including the Brevard County improvement) were identified with a weighted average cost of approximately $4.22 million per lane mile. However, projects in more recent years (2020+) indicate cost figures above $5.00 million per lane mile.

Based on these datasets, a conservative state road construction cost of $4.20 million per lane mile (curb & gutter design) was used in the transportation impact fee calculation.

Construction Engineering/Inspection

City/County Roadways

The CEI cost factor for city/county roads is estimated as a percentage of the construction cost per lane mile. This factor is determined based on a review of CEI-to-construction cost ratios from other jurisdictions throughout Florida. As shown in Table B-7, the CEI factors ranged from three (3) percent to 17 percent with a weighted average of nine (9) percent. For purposes of this study, the CEI cost for city/county roads is estimated at nine (9) percent of the construction cost per lane mile.

State Roadways

The CEI cost factor for state roads is estimated as a percentage of the construction cost per lane mile. This factor is determined based on a review of CEI-to-construction cost ratios from other jurisdictions throughout Florida. As shown in Table B-7, the CEI factors ranged from 10 percent to 11 percent with a weighted average of 11 percent. For purposes of this study, the CEI cost for state roads is estimated at 11 percent of the construction cost per lane mile.

Table B-7

CEI Cost Factor for City/County & State Roads – Other Florida Jurisdictions

Year	County	County Roadways (Cost per Lane Mile)			State Roadways (Cost per Lane Mile)		
		CEI	Constr.	CEI Ratio	CEI	Constr.	CEI Ratio

Roadway Capacity

As shown in Table B-8, the average capacity per lane miles was based on the projects in the Space Coast TPO's 2045 Long Range Transportation Plan's cost feasible plan project lists. The listing of projects reflects the mix of improvements that will yield the vehicle-miles of capacity (VMC) that will be built in Brevard County. The resulting weighted average capacity per lane mile of approximately 9,700 was used in the transportation impact fee calculation.

Appendix C:
Credit Component

Appendix C: Credit Component

This appendix presents the detailed calculations for the credit component. County fuel taxes that are collected in Brevard County are listed below, along with a few pertinent characteristics of each.

1. Constitutional Fuel Tax (2¢/gallon)

- Tax applies to every net gallon of motor and diesel fuel sold within a county. Collected in accordance with Article XII, Section 9 (c) of the Florida Constitution.
- The State allocated 80 percent of this tax to Counties after first withholding amounts pledged for debt service on bonds issued pursuant to provisions of the State Constitution for road and bridge purposes.
- The 20 percent surplus can be used to support the road construction program within the county.
- Counties are not required to share the proceeds of this tax with their municipalities.

2. County Fuel Tax (1¢/gallon)

- Tax applies to every net gallon of motor and diesel fuel sold within a county.
- Primary purpose of these funds is to help reduce a County's reliance on ad valorem taxes.
- Proceeds are to be used for transportation-related expenses, including the reduction of bond indebtedness incurred for transportation purposes. Authorized uses include acquisition of rights-of-way; the construction, reconstruction, operation, maintenance, and repair of transportation facilities, roads, bridges, bicycle paths, and pedestrian pathways; or the reduction of bond indebtedness incurred for transportation purposes.
- Counties are not required to share the proceeds of this tax with their municipalities.

3. Municipal Fuel Tax (1¢/gallon)

- Tax applies to every net gallon of motor fuel sold within a county.
- Primary purpose of the municipal revenue sharing program is to ensure a minimum level of parity across units of local government.
- Proceeds may be used to fund the purchase of transportation facilities and road and street right-of-way; construction, reconstruction, and maintenance of roads, streets, bicycle paths, and pedestrian pathways; adjustments of city-owned utilities as required by road and street construction; and construction, reconstruction, transportation-related public safety activities, maintenance, and operation of transportation facilities.

- The City of Palm Bay receives approximately 36 percent of the proceeds.

4. 1st Local Option Tax (up to 6¢/gallon)

- Tax applies to every net gallon of motor and diesel fuel sold within a county.
- Proceeds may be used to fund transportation expenditures.
- To accommodate statewide equalization, all six cents are automatically levied on diesel fuel in every county, regardless of whether a county is levying the tax on motor fuel at all or at the maximum rate.
- Proceeds are distributed to a county and its municipalities according to a mutually agreed upon distribution ratio, or by using a formula contained in the Florida Statutes.
- Brevard County has implemented all six pennies of this local option tax.

Each year, the Florida Legislature's Office of Economic and Demographic Research (EDR) produces the *Local Government Financial Information Handbook*, which details the estimated local government revenues for the upcoming fiscal year. Included in this document are the estimated distributions of the various fuel tax revenues for each county in the state. The 2023-24 data represent projected fuel tax distributions to Brevard County for the current fiscal year. Table C-1 shows the distribution per penny for each of the fuel levies, and then the calculation of the weighted average for the value of a penny of fuel tax. The weighting procedure takes into account the differing amount of revenues generated for the various types of fuel taxes. It is estimated that approximately $4.22 million of annual revenue will be generated for the County from one penny of fuel tax in Brevard County.

Revenues from other sources, such as grants, etc. are converted to gas tax equivalent using this dollar value as a conversion factor. This conversion is needed to be able to relate associate funding to travel by each land use.

Table C-1
Estimated Fuel Tax Distribution Allocated to Capital Programs for Brevard County & Municipalities, FY 2023-24[1]

Tax	Amount of Levy per Gallon	Total Distribution	Distribution per Penny
Constitutional Fuel Tax	$0.02	$7,655,109	$3,827,555
County Fuel Tax	$0.01	$3,385,149	$3,385,149
Municipal Fuel Tax	$0.01	$3,381,899	$3,381,899
1st Local Option (1-6 cents)	$0.06	$27,740,416	$4,623,403
Total	**$0.10**	**$42,162,573**	
Weighted Average per Penny[2]			**$4,216,257**

1) Source: Florida Legislature's Office of Economic and Demographic Research, http://edr.state.fl.us/content/local-government/reports/ --
2) The weighted average distribution per penny is calculated by taking the sum of the total distribution and dividing that value by the sum of the total levies per gallon (multiplied by 100).

Capital Improvement Credit

A revenue credit for the annual expenditures on transportation capacity-expansion projects in the City of Palm Bay and Brevard County is presented below. The components of the credit are as follows:

- City capital project funding
- County capital project funding
- State capital project funding

The annual expenditures from each revenue source are converted to equivalent fuel tax pennies to be able to create a connection between travel by each land use and non-impact fee revenue contributions for all revenue sources.

City Capital Project Funding

A review of historical expenditures and planned capacity expansion improvements in the City of Palm Bay identified minor signal cabinet and traffic calming transportation improvements, but the funding levels were negligible. However, the City does have transportation debt related to a new connector road for an I-95 interchange. The remaining debt schedule, which results in an equivalent credit of 0.2 pennies, is summarized in Table C-2.

Table C-2

City Debt Service Fuel Tax Equivalent Pennies

Source	Cost of Projects	Number of Years	Revenue from 1 Penny[2]	Equivalent Pennies[3]
Local Option Gas Tax Rev. Note, Series 2018[1]	$7,589,520	10	$4,216,257	**$0.002**

1) Source: Table C-6
2) Source: Table C-1
3) Cost of projects divided by number of years divided by revenue from 1 penny (Item 3) divided by 100

County Capital Project Funding

A review of the County's FY 2023-2027 Capital Improvement Plan indicates that a combination of fuel tax revenues, impact fees, and grants are the primary revenue sources used to fund transportation capacity expansion improvements. As shown in Table C-3, Brevard County allocates an equivalent of approximately 2.0 pennies for non-impact fee revenues dedicated to capacity expansion projects such as traffic circulation, lane additions, and intersection improvements. The equivalent fuel tax credit in Table C-3 does not include the portion of fuel tax revenues being used to repay debt service.

Table C-3

County Fuel Tax Equivalent Pennies

Source	Cost of Projects	Number of Years	Revenue from 1 Penny[2]	Equivalent Pennies[3]
Projected CIP Expenditures (FY 2023-2027)[1]	$42,831,191	5	$4,216,257	**$0.020**

1) Source: Table C-7
2) Source: Table C-1
3) Cost of projects divided by number of years divided by revenue from 1 penny (Item 3) divided by 100

In addition, an equivalent credit of 0.9 pennies was calculated for Brevard County debt service associated with the Local Option Fuel Tax Revenue Bond, Series 2016.

Table C-4

County Debt Service Fuel Tax Equivalent Pennies

Source	Cost of Projects	Number of Years	Revenue from 1 Penny[2]	Equivalent Pennies[3]
Local Option Fuel Tax Rev. Bond, Series 2016[1]	$54,686,590	14	$4,216,257	**$0.009**

1) Source: Table C-8
2) Source: Table C-1
3) Outstanding debt divided by number of years divided by revenue from 1 penny (Item 7) divided by 100

State Capital Project Funding

In the calculation of the equivalent pennies of fuel tax from the State, funding on transportation capacity-expansion projects spanning a 15-year period (from FY 2014 to FY 2028) were reviewed. This included capacity expansion projects such as lane additions, new road construction, intersection improvements, interchanges, traffic signal projects, and other capacity-addition projects. The use of a 15-year period, for purposes of developing a state credit for roadway capacity expansion projects, results in a stable credit, as it accounts for the volatility in FDOT spending in a jurisdiction over short periods of time.

The total cost of the transportation capacity-expansion projects for the "historical" periods and the "future" period:

- FY 2014-2018 work plan equates to 4.5 pennies
- FY 2019-2023 work plan equates to 5.9 pennies
- FY 2024-2028 work plan equates to 5.2 pennies

The combined weighted average over the 15-year period of state expenditure for capacity-expansion transportation projects results in a total of 5.2 equivalent pennies. Table C-5 documents this calculation. The specific projects that were used in the equivalent penny calculations are summarized in Table C-9.

Table C-5

State Fuel Tax Equivalent Pennies

Source	Cost of Projects	Number of Years	Revenue from 1 Penny[4]	Equivalent Pennies[5]
Projected Work Program (FY 2024-2028)[1]	$108,752,838	5	$4,216,257	$0.052

(1) The FHWA estimates national trends by using State reported Highway Performance and Monitoring System (HPMS) data, fuel consumption data (MF-21), vehicle registration data (MV-1), other data such as the R.L. Polk vehicle data, and a host of modeling techniques.

(2) Light Duty Vehicles Short WB - passenger cars, light trucks, vans and sport utility vehicles with a wheelbase (WM) equal to or less than 121 inches. Light Duty Vehicles Long WB - large passenger cars, vans, pickup trucks, and sport/utility vehicles with wheelbases (WB) larger than 121 inches. All Light Duty Vehicles - passenger cars, light trucks, vans and sport utility vehicles regardless of wheelbase.

(3) Single-Unit - single frame trucks that have 2-Axles and at least 6 tires or a gross vehicle weight rating exceeding 10,000 lbs.

(4) For 2021 and 2020, the vehicle occupancy is estimated by the FHWA from the 2017 National Household Travel Survey (NHTS) and the annual R.L. Polk Vehicle registration data; For single unit truck and heavy trucks, 1 motor vehicle mile traveled = 1 person-mile traveled.

(5) VMT data are based on the latest HPMS data available; it may not match previous published results.

Appendix D:
Calculated Transportation Impact Fee Schedule

Appendix D: Calculated TIF Schedule

This appendix presents the detailed fee calculations for each land use in the City of Palm Bay's transportation impact fee schedule.

1) Net VMT calculated as ((Trip Generation Rate* Trip Length* % New Trips)*(1-Interstate/Toll Facility Adjustment Factor)/2). This reflects the unit of vehicle-miles of capacity consumed per unit of development and is multiplied by the cost per vehicle
2) Source: City of Palm Bay Growth Management Department
3) The assessable trip length was based on LUC 251 (base trip length (5.42) but adjusted by the ratio of the single family (LUC 210) base trip length (6.62) to the multi-family (LUC 220) base trip length (5.21). Adj = 5.21 / 6.62 = 80%. TL = 80% × 5.42 = 4.34
4) The ITE 11th Edition trip generation rate for PM Peak Hour of Adjacent traffic was adjusted by a factor of 10 to approximate the Daily TGR
5) The percent new trips for schools was estimated at 90% based on LUC 710, but was then adjusted to 80% to provide a conservative fee rate. This adjustment reflects the nature of elementary and middle school uses where attendees are unable to drive and are typically dropped off by parents/guardians on their way to another destination
6) Due to only slight variation, the trip generation rates for LUC 945 2,000 to 3,999 sq ft and 4,000 to 5,499 sq ft were combined into a weighted average trip generation rate for a single land use tier of 2,000 to 5,499 sq ft

City of Palm Bay, FL

FY 2024 Impact Fee Study

February 1, 2024

Stantec

Agenda

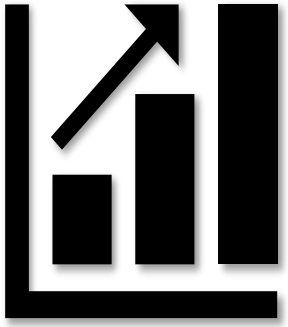
1. Background
2. Methodology
3. Calculation
4. Survey
5. Next Steps

Background

- Impact fees allow new development to *"pay its own way"*
  - Funds expansion related capital costs
  - Not for operations, maintenance, or replacement

- Without impact fees:
  1) the facilities may not be constructed
  2) level of service may degrade
  3) the facilities may be funded by existing taxpayers

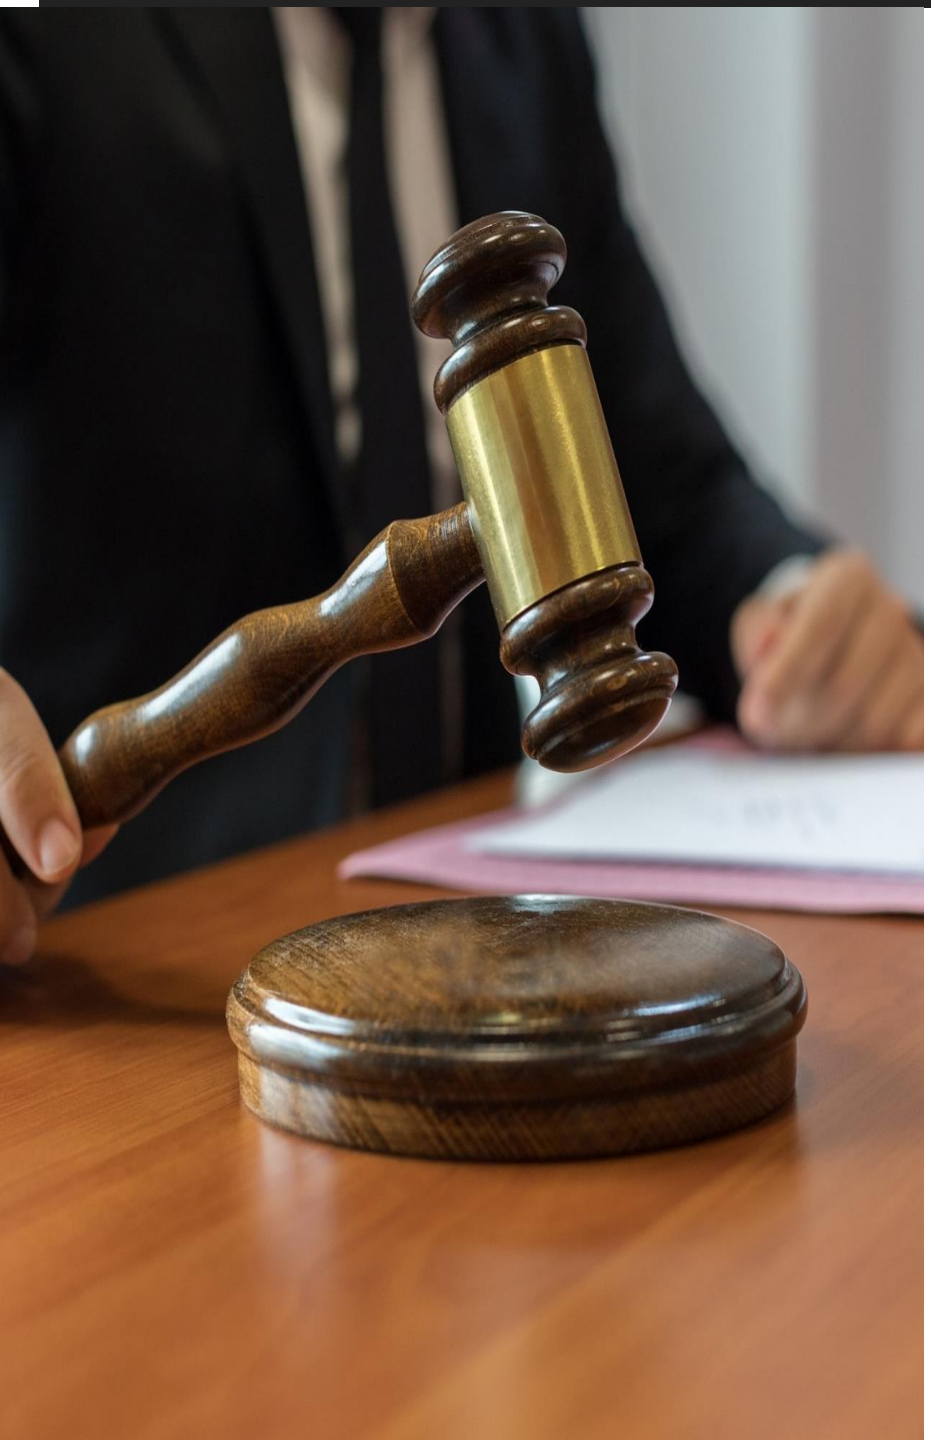
Background



- Impact Fees were last updated in 2019 by our Team
  - **Parks & Recreation**, **Police**, & **Fire**

- City retained Stantec to update the Impact Fees
  - US ENR - CCI Index has increased 20% since 2019
  - Delayed **Parks & Recreation** until Parks Master Plan complete

House Bill 337 – Reforms to Florida Impact Fee Law



"Phase-In Limitations" on Impact Fee Increases

- ☑ ≤ 25% Two Equal Annual Increments
- ☑ >25% ≤ 50% Four Increments
- ☑ >50% Not Allowed
- ☑ Increase only once every 4 years

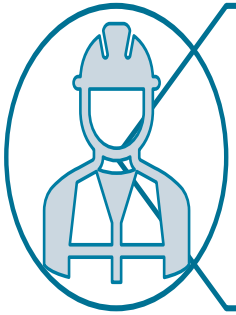
Exceeding the Limitations

1. A special study that outlines ***extraordinary circumstances***
2. Two publicly noticed workshops
3. Two-thirds approval

Methodology

Buy-in Method

- Uses estimated replacement cost of the department's major assets



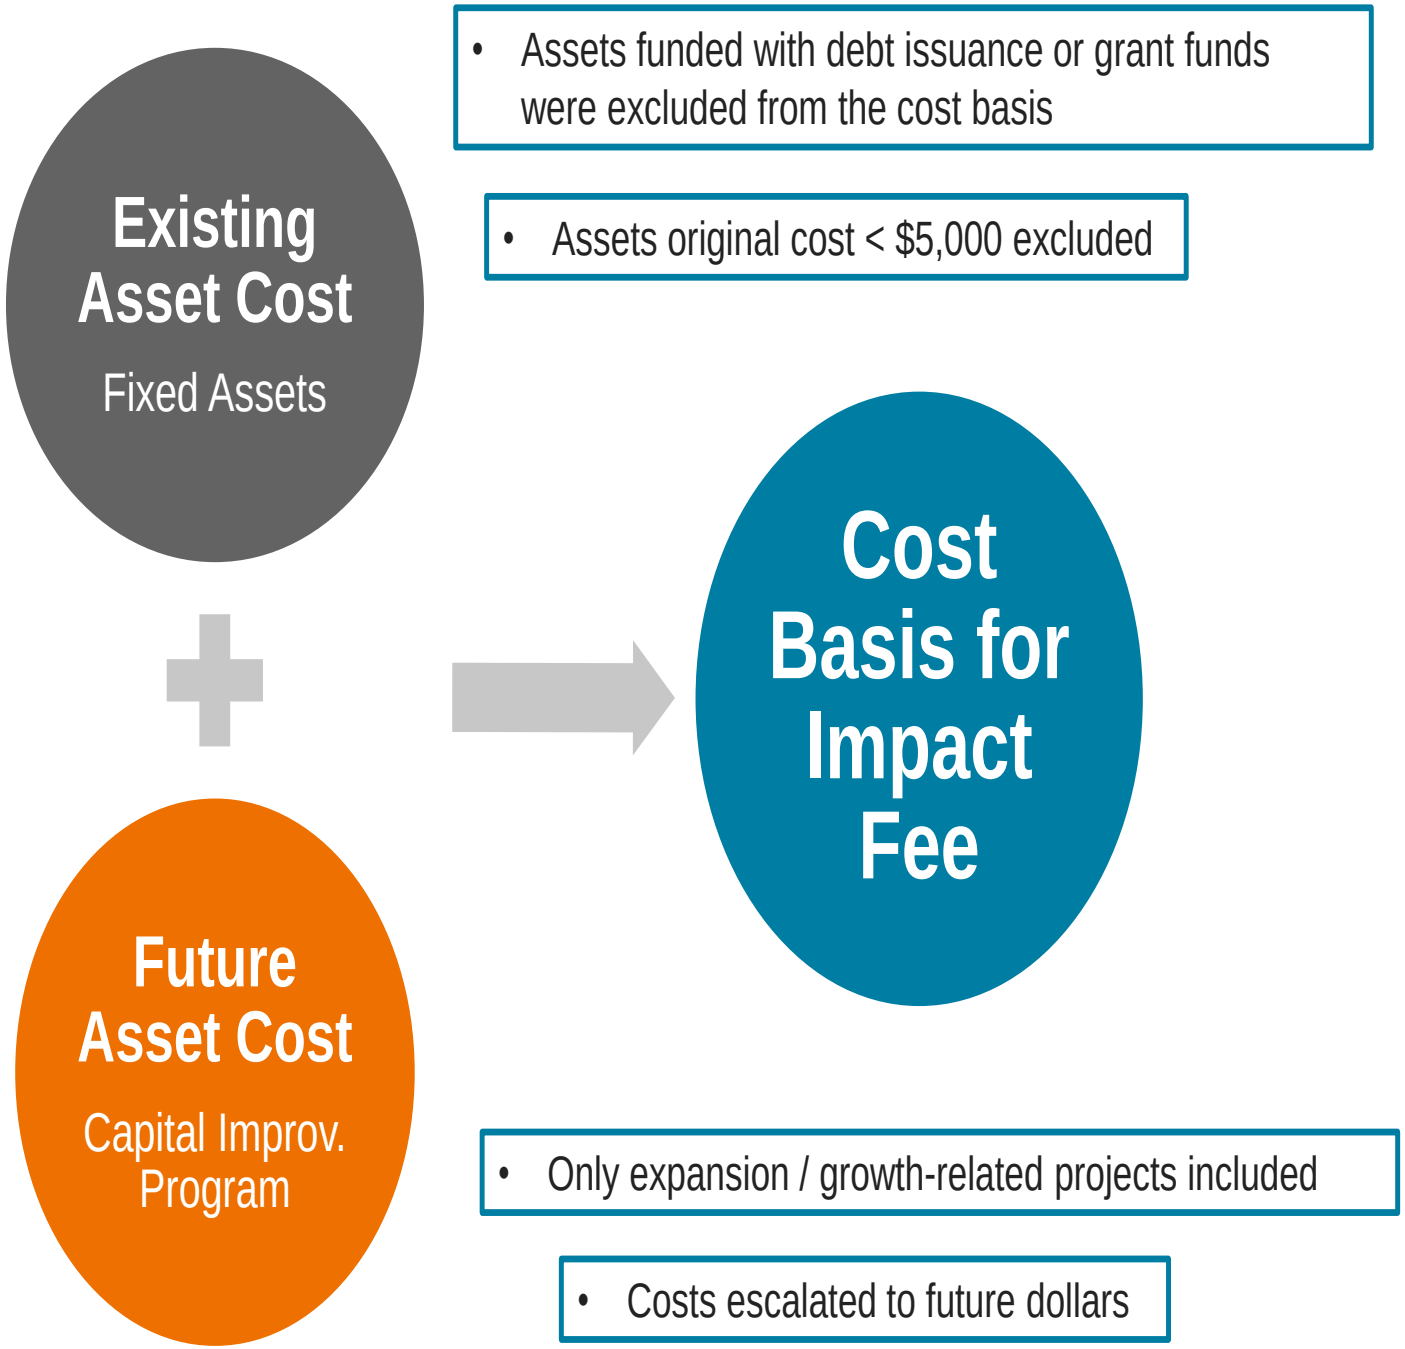
Incremental Method

- Uses a multi-year capital improvement plan associated with providing additional capacity

Hybrid Method

- A combination of the two approaches described
- Appropriate when there is some capacity
- Additional capacity is also needed & planned

Cost Basis



- Assets funded with debt issuance or grant funds were excluded from the cost basis
- Assets original cost < $5,000 excluded
- Only expansion / growth-related projects included
- Costs escalated to future dollars

Capacity

Functional Population

- Estimation of the # of people
- Common unit of measurement
- Measures Existing & Future Capacity

Residential

Average # of occupants

Unit = 1 Household

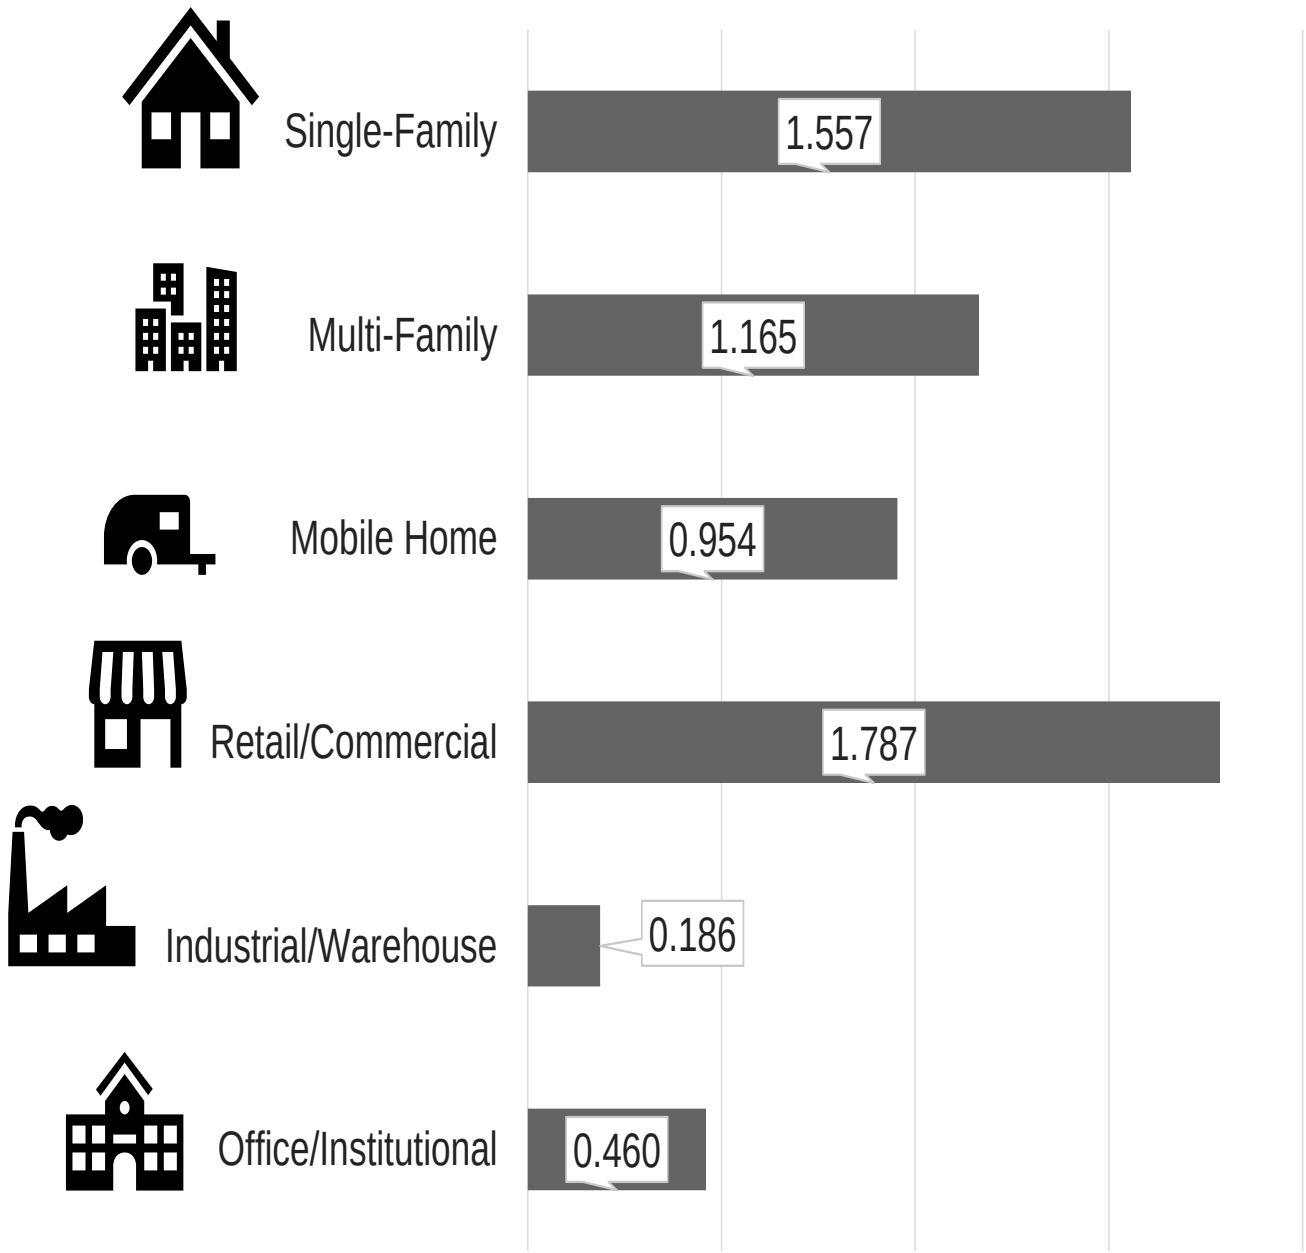
Non-Residential

Average # of employees and visitors

Unit = 1,000 Sq Ft

Functional Population

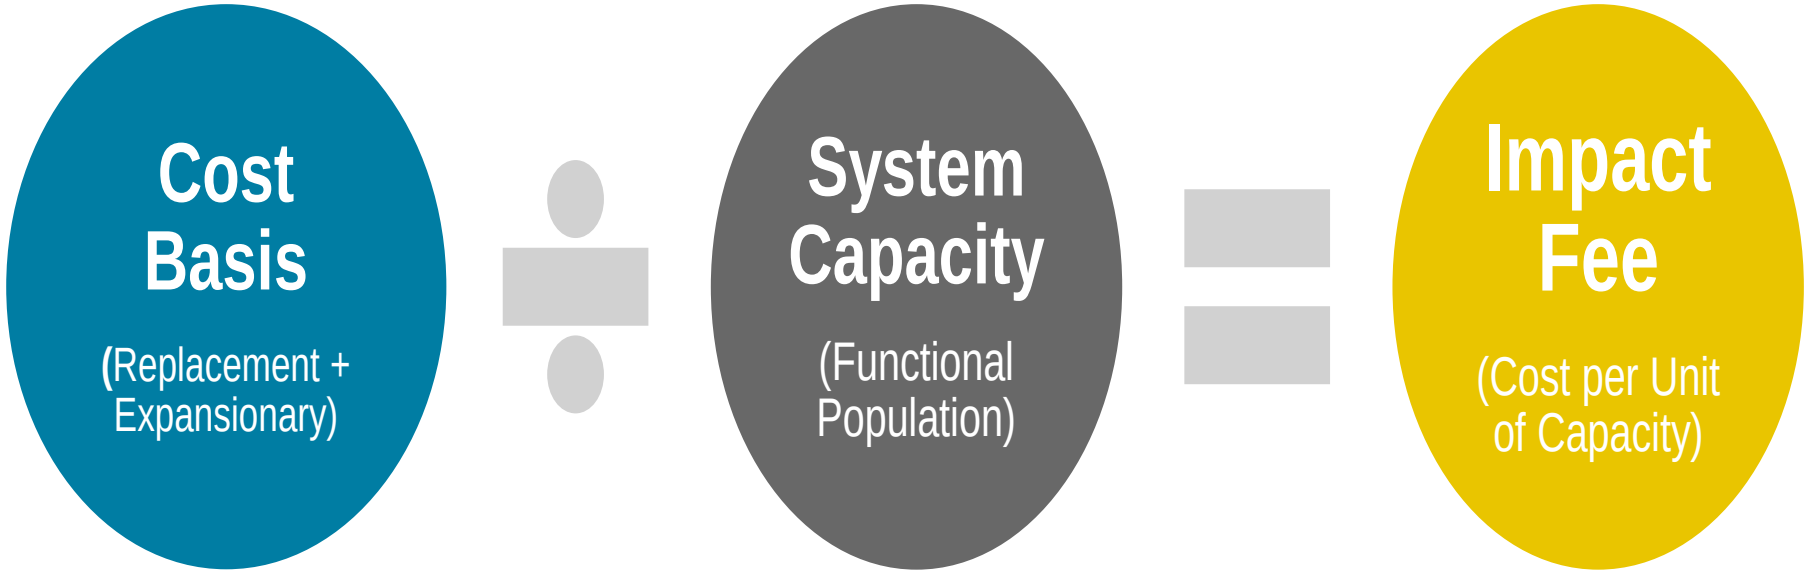
EDU = “Equivalent Dwelling Unit”



EDU Factors

Single-Family	1.00
Multi-Family	0.75
Mobile Home	0.61
Retail/Commercial	1.15
Industrial/Warehouse	0.12
Office/Institutional	0.30

Hybrid Methodology



Fire Cost Basis	Police Cost Basis
$108,913,596	$56,329,112

Existing Capacity	Future Capacity
56,429 EDUs	56,429 EDUs
	100% Increase per CIP

Fire Impact Fee Results

Land Use	EDU Factor	Fire Impact Fee Per Unit	Unit Type	2018 Fees	Change %

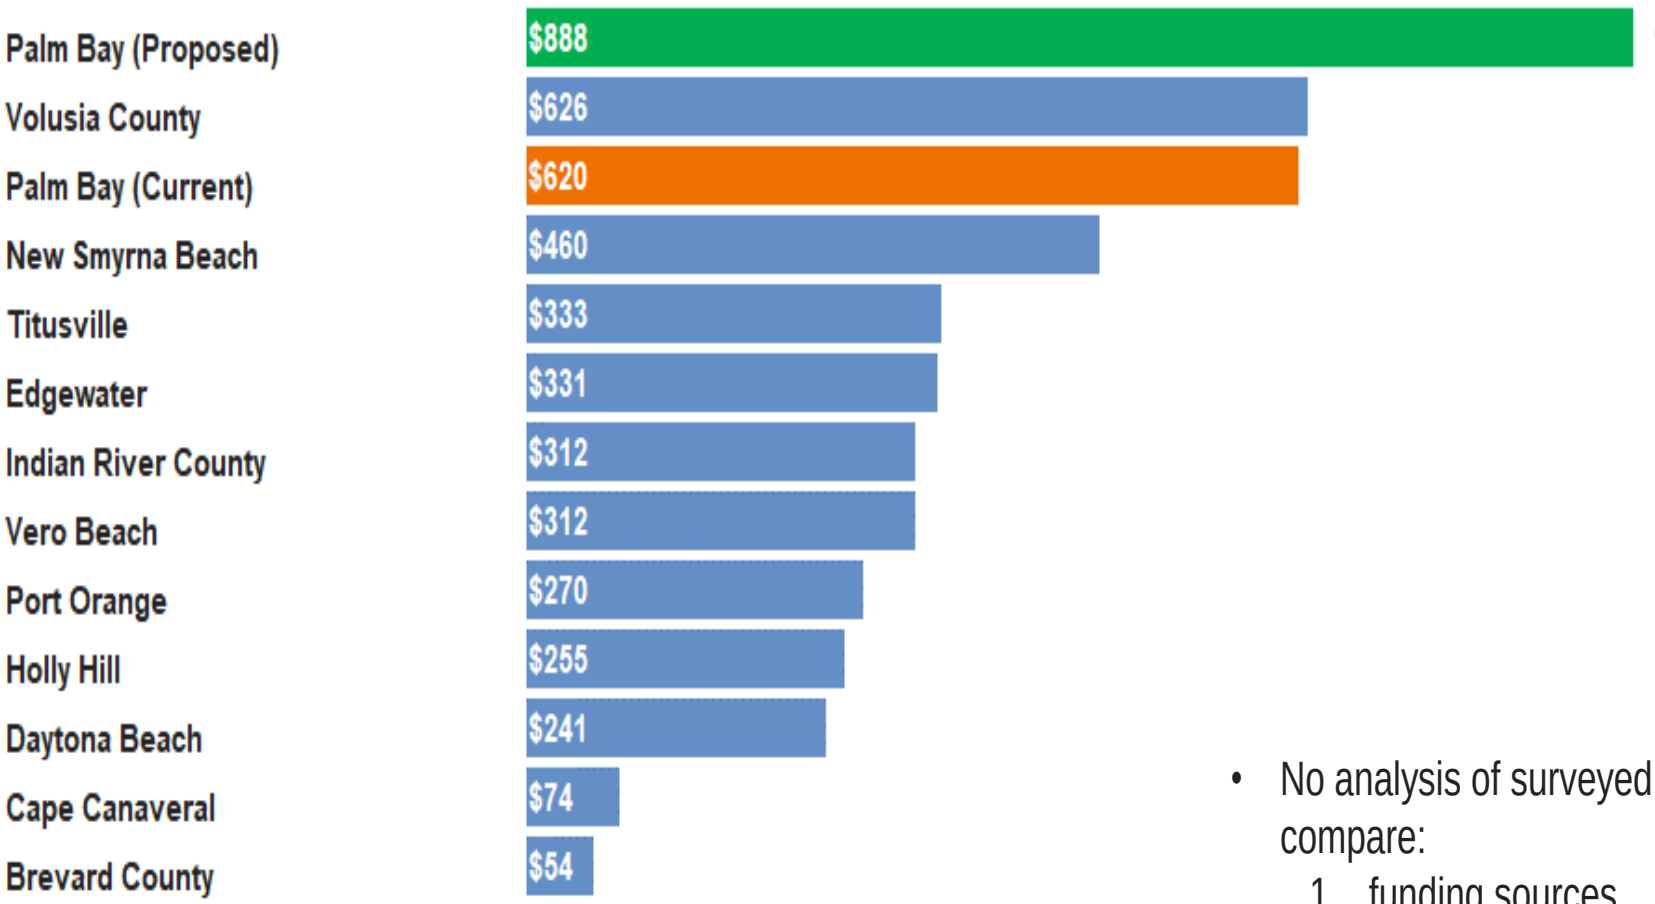
Mobile Home	$ 284.86	$ 304.00	$ 304.00	$ 304.00	$ 304.00
Retail/Commercial	$ 529.90	$ 573.00	$ 573.00	$ 573.00	$ 573.00
Industrial/Warehouse	$ 80.99	$ 60.00	$ 60.00	$ 60.00	$ 60.00
Office/Institutional	$ 298.87	$ 149.00	$ 149.00	$ 149.00	$ 149.00

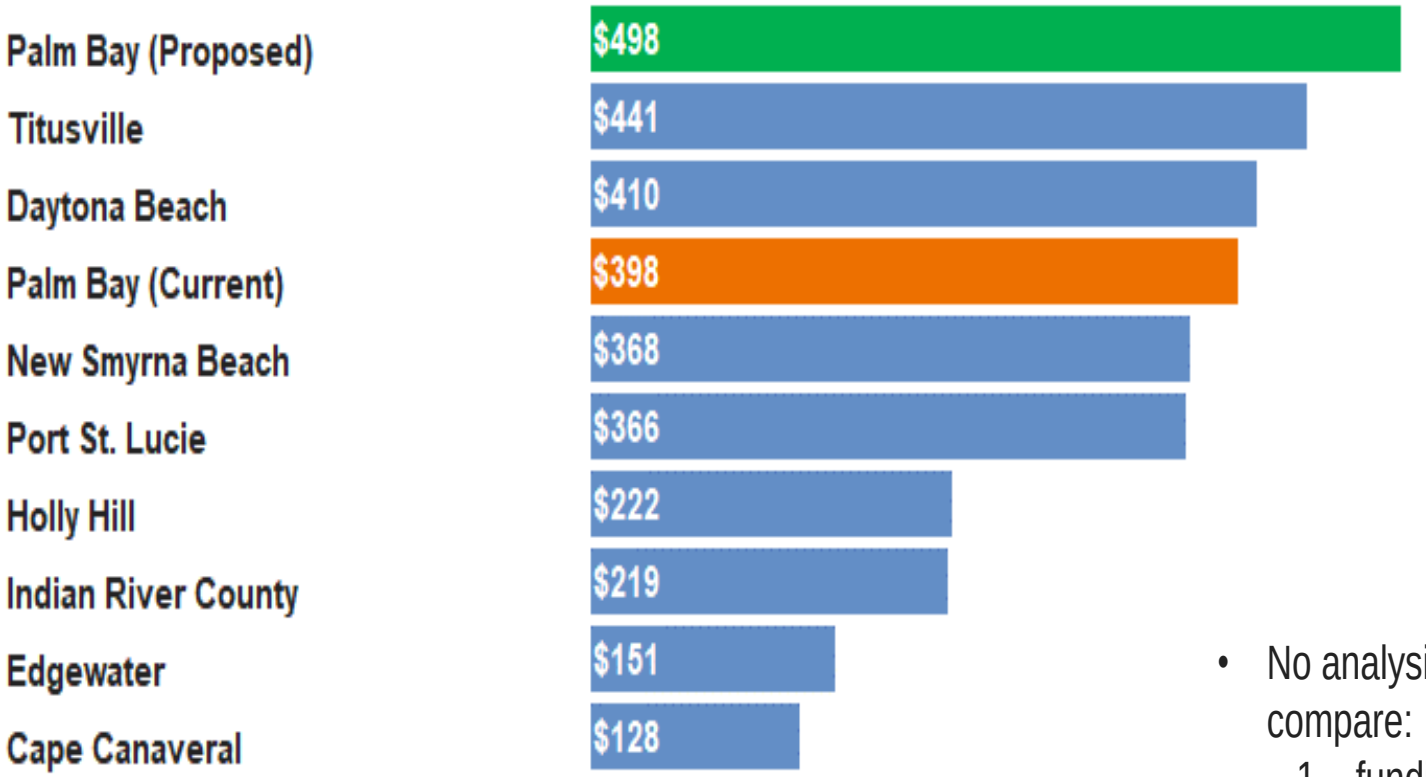
Fire Impact Fee Survey – Single Family



- No analysis of surveyed entities to compare:
  1. funding sources,
  2. level of service,
  3. age of infrastructure
  4. time of last study,
  5. or other contributing factors.

* Non-residential Fee not shown

Police Impact Fee Survey – Single Family



(Year 4)

- No analysis of surveyed entities to compare:
  1. funding sources,
  2. level of service,
  3. age of infrastructure
  4. time of last study,
  5. or other contributing factors.

* Non-residential Fee not shown

Next Steps

- Consider adopting the 4-year schedule of calculated impact fees as presented herein.
- Set **public hearing** date for adoption
- Notice required **90 days** before the effective date

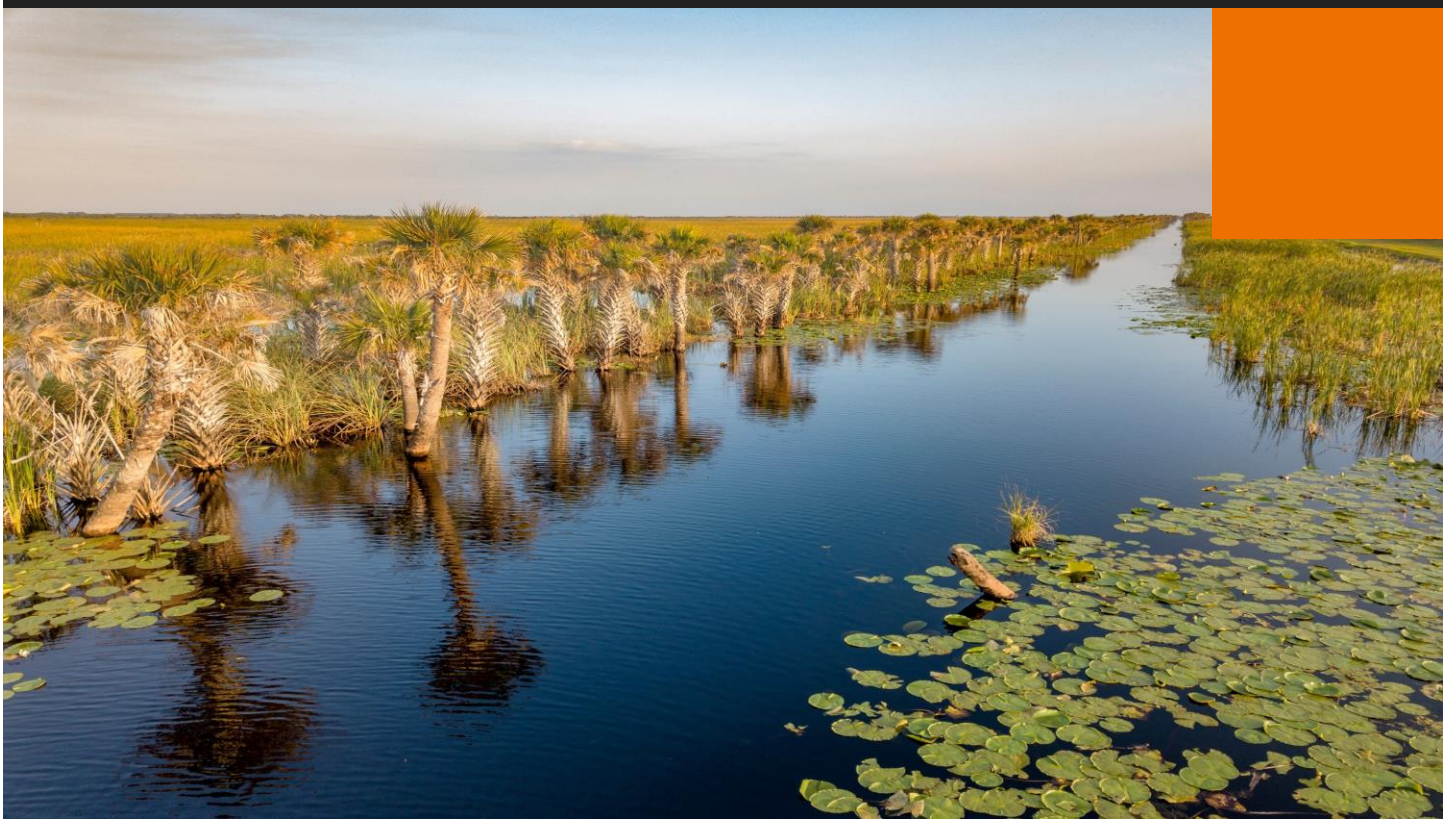
Fire Rescue and Police Impact Fee Study Draft Report

March 14, 2024



March 14, 2024

Suzanne Sherman
City Manager
120 Malabar Road
Palm Bay, FL 32907

Re: Fire Rescue and Police Impact Fee Study – Draft Report

Dear Ms. Sherman,

Stantec Consulting Services Inc. is pleased to present this Draft Report of the Fire Rescue and Police Impact Fee Study that we performed for the City of Palm Bay, Florida. We appreciate the fine assistance provided by you and all the members of the City staff who participated in the Study.

If you or others at the City have any questions, please do not hesitate to call me at (904) 671-0117 or email me at Peter.Napoli@stantec.com. We appreciate the opportunity to be of service to the City and look forward to the possibility of doing so again in the near future.

Sincerely,

Peter Napoli
Manager

777 S. Harbour Island Blvd., Suite 600
Tampa, Florida 33602

1. EXECUTIVE SUMMARY

1.1 INTRODUCTION

Stantec Consulting Services, Inc. (Stantec) was retained by the City of Palm Bay, Florida (hereafter referred to as the "City") to conduct an Impact Fee Study (Study). This report presents the results of the Study, including background information, legal requirements, an explanation of the calculation methodology employed, results of the analysis, as well as a comparative impact fee survey.

The principal objectives or components of the Study are as follows:

Fire Rescue Impact Fee – Calculate the maximum impact fee that the City can charge based on the existing level of service provided to existing residents and businesses in the form of Fire Rescue services.

Police Impact Fee – Calculate the maximum impact fee that the City can charge based on the existing level of service provided to existing residents and businesses in the form of Police services.

1.2 BACKGROUND

Impact fees are assessed against new development to recover some or all of the cost of providing capital facilities (infrastructure) needed to serve new development. Such charges are the mechanism by which new growth can "pay its own way" and minimize the extent to which existing residents must bear the cost of new or expanded facilities, which are necessitated by new residents and new businesses. Impact fees are capital cost recovery fees and are commonly referred to as impact fees, capacity fees, and development fees. For the purposes of this report, the use of the terms impact fees, capacity fees, development fees is interchangeable with impact fees.

The City of Palm Bay currently charges impact fees for Fire Rescue facilities and for Police facilities, the goal of the Study is to update the City's impact fees with the most current available data. Stantec last updated the City's impact fees in 2018 and it is recommended that impact fees be updated approximately every five years to accurately reflect changes in a City's cost of facilities, property demographics, and level of service. The City's current impact fees for Fire Rescue facilities and Police facilities are presented in Table 1.

Table 1 – Current Impact Fees

Land Use	Fire Impact Fee Per Unit	Police Impact Fee Per Unit	Unit Type
Single-Family	$ 620.09	$ 398.15	Dwelling Unit
Multi-Family	$ 503.16	$ 323.07	Dwelling Unit
Mobile Home	$ 443.64	$ 284.86	Dwelling Unit
Retail/Commercial	$ 825.27	$ 529.90	1,000 Square Feet
Industrial/Warehouse	$ 126.14	$ 80.99	1,000 Square Feet
Office/Institutional	$ 465.46	$ 298.87	1,000 Square Feet

1.3 SUMMARY OF RECOMMENDATIONS

The updated Fire Rescue and Police impact fees calculated herein are shown in Table 2. This fee schedule brings together all components of the fee calculations reflecting the results of this Study. The proposed fees are structured into five separate land use categories representing the different service demands associated with new development in those categories. The fees are structured on a cost per service unit basis.

Table 2 – Updated Impact Fees

Land Use	Fire Impact Fee Per Unit	Police Impact Fee Per Unit	Unit Type
Single-Family	$ 930.00	$ 498.00	Dwelling Unit
Multi-Family	$ 698.00	$ 374.00	Dwelling Unit
Mobile Home	$ 567.00	$ 304.00	Dwelling Unit
Retail/Commercial	$ 1,070.00	$ 573.00	1,000 Square Feet
Industrial/Warehouse	$ 112.00	$ 60.00	1,000 Square Feet
Office/Institutional	$ 279.00	$ 149.00	1,000 Square Feet

It is recommended that the City implement these impact fees at any level up to the 100% cost recovery rates shown in Table 2. Different adoption percentages could be applied to the two different fees but the percentage for each fee type should be applied uniformly to all land use types to retain the proportionality of the fees to the impact of various types of development.

Florida Statues states that impact fee increases less than 25% must be implemented in two equal phases and increases of up to 50% must be implemented in four equal phases. The Fire impact fee increases vary with the largest increase being 50% to the Single-Family land use, and the Police impact fee increases vary with the largest increase being 25% to the Single-Family land use class. The decreases in two land use categories reflect the updated non-residential functional population results, as shown in detail in Table 7 of

this report and can be implemented in one year. The proposed Fire Rescue Impact Fee phase-in schedule is presented in Table 3.

Table 3 – Fire Rescue Impact Fee Phase in Schedule

Land Use	Calculated Change	Phase-In Time	Current Fee	Year 1	Year 2	Year 3	Year 4
Single-Family	50%	4 Years	$ 620.09	$ 698.00	$ 775.00	$ 853.00	$ 930.00
Multi-Family	39%	4 Years	$ 503.16	$ 552.00	$ 601.00	$ 649.00	$ 698.00
Mobile Home	28%	4 Years	$ 443.64	$ 474.00	$ 505.00	$ 536.00	$ 567.00
Retail/Commercial	30%	4 Years	$ 825.27	$ 886.00	$ 948.00	$ 1,009.00	$ 1,070.00
Industrial/Warehouse	-11%	1 Year	$ 126.14	$ 112.00	$ 112.00	$ 112.00	$ 112.00
Office/Institutional	-40%	1 Year	$ 465.46	$ 279.00	$ 279.00	$ 279.00	$ 279.00

The proposed Police Impact Fee phase-in schedule is presented in Table 4.

Table 4 – Police Impact Fee Phase in Schedule

Land Use	Calculated Change	Phase-In Time	Current Fee	Year 1	Year 2	Year 3	Year 4
Single-Family	25%	2 Years	$ 398.15	$ 448.00	$ 498.00	$ 498.00	$ 498.00
Multi-Family	16%	2 Years	$ 323.07	$ 349.00	$ 374.00	$ 374.00	$ 374.00
Mobile Home	7%	2 Years	$ 284.86	$ 294.00	$ 304.00	$ 304.00	$ 304.00
Retail/Commercial	8%	2 Years	$ 529.90	$ 551.00	$ 573.00	$ 573.00	$ 573.00
Industrial/Warehouse	-26%	1 Year	$ 80.99	$ 60.00	$ 60.00	$ 60.00	$ 60.00
Office/Institutional	-50%	1 Year	$ 298.87	$ 149.00	$ 149.00	$ 149.00	$ 149.00

2. LEGAL FRAMEWORK

Many of the legal precedents and requirements for impact fees in Florida date back to a Florida Supreme Court decision in the case of *Contractors and Builders Association of Pinellas County versus the City of Dunedin, Florida*. This case identified certain conditions to support a valid impact fee that were ultimately embodied in statutory guidelines enacted by the Growth Management Legislation passed in 1985. These legal standards require that impact fees must 1) bear a reasonable relationship to the benefit received by those who pay it, 2) must not exceed the proportional share of the cost of new facilities or services needed to serve new development and must include credits for contributions the development will make toward deferring that cost, and 3) must be earmarked and expended in such a way as to ensure that those paying the fee receive benefit from that payment.

Also, in 2006 Florida Legislature passed Senate Bill 1194 that created Section 163.31801, Florida Statutes, which has also come to be known as the “Florida Impact Fee Act”. This legislation outlined additional requirements regarding the calculation and accounting of impact fees. Most notably, this legislation requires 1) that the calculation of impact fees be based upon the most recent, localized data, 2) separate reporting/accounting of impact fee revenue and expenditures must be made in a dedicated fund for each

impact fee category, 3) that the administrative charges collected in impact fees be based upon actual costs, and 4) that 90 days' notice be given prior to the effective date of an ordinance imposing or amending an impact fee.

In summary, the courts and subsequent legislation have addressed three areas associated with the development of impact fees. These areas include: 1) "fair share" allocation rules dealing with payment of impact fees by the affected property owners, 2) "rational nexus" standards, which focus on the purpose of impact fees, and 3) expenditure requirements including "credit" allowances, which recognize offsets in the calculation of impact fees for other dedicated funding sources such as grants, donations, sales tax programs, etc.

The "fair share" allocation rules require that an impact fee only be used for capital expenditures that are attributable to new growth. Additionally, the "fair share" allocation rules recognize that the cost of facilities used by both existing customers and new development must be apportioned between the two user groups, such that the user groups are treated equally, and one group does not subsidize the other.

The "rational nexus" standards require that there is a reasonable relationship between the need for capital facilities and the benefits received by new customers for which the impact fee will be expended.

There are two conditions that limit where and when impact fees can be collected and used. With respect to the first condition, although there is no specific limit as to distance between an applicant paying the impact fee and the capital expenditure to be constructed by the fee, there should be a general geographical relationship between fee collection and use. The second nexus condition recognizes that the property must receive a benefit from the service for which the impact fee is being applied. With respect to the Fire Rescue and Police impact fees considered in this study, the facilities and equipment included are used by and constructed or purchased on behalf of all properties within the City service area, and they benefit both residential and non-residential property-owners. Consequently, all new growth requesting capacity from the City will be subject to these impact fees.

The "credit" allowance requirements recognize that if a public agency has received property in the form of a cost-free capital donation, or if there is another revenue source that will be used for the capital expenditures necessitated by new growth, a credit should be included within the determination of the impact fees. Specifically, "credits" should be reflected as part of calculating impact fees to recognize any grants, contributions by developers, assessments, and other sources that provide funds for the same capital expenditures included in the basis of impact fees to avoid a double-recovery of costs.

NEW STATUTORY CHANGES

On June 6th, 2021, the State of Florida's Governor signed into law House Bill No. 337, amending the Florida Impact Fee Act in several areas, including a limitation on impact fee increases[1] and more specific

[1] Florida Statutes 163.31801, Subsection (6): An increase to a current impact fee rate of less than 25 percent of the current rate must be implemented in two equal annual increments. An increase to a current impact fee rate of more than 25 percent and less

definitions for the terms “infrastructure” and “public facilities”. With respect to the limitation on impact fee increases, the Florida Impact Fee Act provides an exemption from the limitations if the following criteria are met:

1. A demonstrated need study has been completed within the 12 months prior to the adoption of the proposed increase, expressly demonstrating the extraordinary circumstances necessitating the need to exceed the phase-in limitations.
2. The local government jurisdiction has held not less than two publicly noticed workshops dedicated to the extraordinary circumstances necessitating the need to exceed the phase-in limitations.
3. The impact fee increase ordinance is approved by at least a two-thirds vote of the governing body.

2.1 GENERAL METHODOLOGY

There are three primary approaches to the calculation of impact fees. One approach, commonly referred to as the buy-in method, or replacement cost approach, is to determine the replacement cost of each departments fixed assets as the cost basis for the impact fee calculation. This approach is most appropriate for a City with considerable excess capacity such that most new development will be served by that existing excess capacity.

The second approach, commonly referred to as the incremental cost method, or marginal cost approach, is based on the portion of each department’s multi-year capital improvement program (CIP) associated with expanding capacity as the cost basis for the impact fee calculation. This approach is most appropriate where 1) the City has virtually no excess capacity to accommodate growth, 2) the CIP has a significant enough number of projects that provide additional capacity to be representative of the cost of capacity, or 3) information on existing infrastructure is not readily available.

The third approach, which was used in this Study, is to use a combination of the two approaches described above. This approach is most appropriate when 1) there is excess capacity that will accommodate some growth, but additional capacity is needed in the relatively short-term as reflected in each department’s CIP, and 2) the CIP includes a significant number of projects that will provide additional capacity, but does not necessarily have a sufficient amount of projects to be reflective of a total system.

The combined approach was used for the City because some growth can be accommodated by the current capacity of the system, yet the CIP contains projects that will provide additional capacity. Using the combined approach effectively provides impact fees that reflect a weighing of the cost of current excess capacity and the cost of future capacity to be provided in the CIP, both of which will be required to accommodate new development in the City.

---

than 50 percent of the current rate must be implemented in four equal installments. An impact fee increase may not exceed 50 percent of the current impact fee rate. An impact fee may not be increased more than once every four years.

3. FIRE RESCUE IMPACT FEE CALCULATION

Determining impact fees for general government services such as Fire Rescue services is a level of service (LOS) based process. The objective is to determine the costs of facilities and capital equipment necessary to serve new growth through an analysis of the existing assets and projected expansion capital improvements. Impact fees by law may not be calculated to enhance levels of service, therefore the fees developed herein are developed based upon the current, observed LOS. This way, the fees are calculated to maintain the existing LOS, rather than enhance LOS standards.

3.1 COST BASIS

City staff has provided the specific costs for original land purchase for facilities, as well as the original purchase costs for all vehicles, equipment and facility construction within the Fire Rescue Department. Vehicle, equipment, and facility costs were escalated to current year costs to identify the estimated replacement cost new of each asset. Based upon Staff's documentation of the funding source for each purchase, existing assets funded by grant programs or contributions/gifts were deducted from the cost basis. Additionally, the Fire Rescue Department has assembled a capital improvement plan which includes the addition of six new stations and the associated vehicles necessary for six new stations. We have assumed 10% of the expansionary CIP will be funded with grants and have excluded that from the cost basis.

Another adjustment made to the calculation of the existing asset replacement cost involves subtracting the outstanding principal owed on debt obligations due to the burden placed on future tax payers by outstanding debt. The 2015 Sales Tax Refunding Bonds funded public safety projects and it was determined that 75% of the projects benefitted the Fire Rescue Department. Subsequently, 75% of the outstanding principal was removed from the existing asset cost. Additionally, a portion of the outstanding principal amount related to a US Bancorp Public Safety Lease Purchase Agreement, which partially funded Fire Rescue Department equipment, was subtracted from the net cost for allocating the impact fees.

The current replacement costs of all Fire Rescue assets and the projected costs of expansion related capital are presented on a summary level on the following page in Table 5, and detailed Schedule 1 and Schedule 2 of the Appendix, respectively.

Table 5 – Estimated Fire Rescue Facilities Cost

Asset Category	Description		Cost
Land	Original Cost	$	58,293
Building	Replacement Cost New	$	10,421,580
Equipment	Replacement Cost New	$	2,100,866
Vehicle	Replacement Cost New	$	11,039,226
Total Existing Asset Cost		**$**	**23,619,965**
Less: Grant Funded Assets		$	(2,361,996)
Less: Outstanding Principal [1]		$	(1,572,312)
Net Existing Asset Cost		**$**	**19,685,656**
Plus: Expansionary CIP Costs		$	89,227,940
Less: Estimated Grant/Contributions [2]		$	(8,922,794)
Total Asset Cost for Fee Calculation		**$**	**99,990,802**

[1] Asset costs funded with debt issuances were excluded from the cost basis as they are funded by a dedicated future funding source supported by current and future tax

[2] Estimated grants for future capital spending based on the proportion of assets funded by grants in the existing asset base.

3.2 EQUIVALENT DWELLING UNITS

Different types of development must be translated into a common unit of measurement that reflects the impact of new development on the demand for Fire Rescue and Police services. The impact fees calculated in this report utilize a common service unit based on an “equivalent dwelling unit” or EDU, which represents the impact of a typical single-family detached dwelling.

3.2.1 Functional Population

In order to assign the appropriate EDUs to properties within each land use category, EDU multipliers are utilized, which are based on a concept called “functional population”. Similar to the concept of full-time equivalent employees, functional population represents the number of “full-time equivalent” people present at the site of a land use. Functional population represents the average number of equivalent persons present at the site of a land use for an entire 24-hour day. For residential development, functional population is simply average household size times the percent of time people spend at home. For nonresidential development, functional population is based on a formula that includes square foot per employee ratios, trip generation rates, average vehicle occupancy and average number of hours spent by employees and visitors at a land use. These all tend to be stable characteristics that do not change significantly over short periods of time. Functional population multipliers by land use are calculated in the following tables.

Table 6 – Functional Population of Residential Units

Land Use	Unit	Average People per Unit [1]	Occupancy [2]	Functional Pop./Unit [3]
Single-Family	Dwelling	2.32	67.0%	1.56
Multi-Family	Dwelling	1.74	67.0%	1.16
Mobile Home	Dwelling	1.42	67.0%	0.95

[1] *U.S. Census Bureau's American Community Survey 2021 (ACS), Public Use Microdata for Brevard County (Southeast).*

[2] *The Occupancy Factor was estimated by assuming 15 hours a day at home on weekdays (15 hrs x 5 days = 75 hrs at home) and 19 hrs a day at home on weekends (19 hrs x 2 days = 38 hrs at home).*

[3] *For residential development, functional population is the average household size times the percent of time people are assumed to spend at home.*

Table 7 – Functional Population of Non-Residential Units

Land Use	ITE Trip Rate [1]	Trip Rate per Trip End	Persons/ Trip [2]	Employees/ Unit [3]	Visitors/ Unit [4]	Functional Population/ Unit [5]
Retail/Commercial	37.01	18.51	2.020	0.79	36.59	1.787
Industrial/Warehouse	4.75	2.38	1.210	0.41	2.47	0.186
Office/Institutional	5.37	2.69	1.740	1.16	3.52	0.460

[1] *Trip rate is average daily trip ends during a weekday from Institute of Transportation Engineers (ITE), Trip Generation, 11th ed., 2021*

[2] *Persons/trip is average vehicle occupancy from Federal Highway Administration, Nationwide Household Travel Survey, 2017.*

[3] *Employees/Unit is from the U.S. Department of Energy, Commercial Buildings Energy Consumption Survey, 2018.*

[4] *Visitors/Unit is trips times persons/trip minus employees/unit.*

[5] *Functional population is estimated employee hours divided by 24hrs in a day (8 hrs times employees/unit plus visitor hours/unit). Vistor hours/unit reflect 1 hour.*

3.2.2 Existing Equivalent Dwelling Units

The functional population multipliers calculated in the previous section were used to establish an EDU for each land use. Since an EDU represents the impact of one average household, the Single-Family residential land use category's functional population is represented by 1 EDU and each land use category is assigned EDUs based on their proportional relationship to the Single-Family residential land use category's functional population per unit. Table 8 presents this calculation.

Table 8 – Functional Population in EDUs

Land Use	Functional Population / Unit	Existing Units [1]	Unit Type	Functional Population Factor	Total EDUs	Unit
Single-Family	1.557	46,020	Dwelling Unit	1.000	46,020	Dwelling Unit
Multi-Family	1.165	2,366	Dwelling Unit	0.750	1,775	Dwelling Unit
Mobile Home	0.954	1,403	Dwelling Unit	0.610	856	Dwelling Unit
Retail/Commercial	1.787	4,423	1,000 Square Feet	1.150	5,087	1,000 Square Feet
Industrial/Warehouse	0.186	5,814	1,000 Square Feet	0.120	698	1,000 Square Feet
Office/Institutional	0.460	6,650	1,000 Square Feet	0.300	1,995	1,000 Square Feet
		66,676		**Total:**	**56,429**	

[1] *Based on an analysis of the Brevard County Property Database*

[2] *EDUs/Unit is calculated for the Land Use categories by dividing each Functional Population/Unit by the Single-Family Functional Population/Unit since the Single-Family Land Use category represents 1 EDU.*

Utilizing the Brevard County Property Appraiser's databases, the EDUs/Unit multipliers for Fire and Rescue and Police are applied to all the units contained within each land use category and added together in order to establish the total existing EDUs utilized in the impact fee calculations in the next sections. The analysis calculates a total existing EDU count within the City of 56,429. This procedure of calculating EDUs is summarized by DOR code can be found on Schedule 3 in the Appendix.

3.2.3 Projected Equivalent Dwelling Units

Based on current level of service, Palm Bay Fire Rescue services have the capacity to serve 56,429 EDUs. Palm Bay has six fire stations that are currently in service. Understanding the proposed CIP, the City plans to double the amount of fire stations to 12 total. To match the expected growth in Palm Bay's fire rescue facilities, the additional capacity provided by the CIP measured in EDUs was estimated to be 56,429 or a 100% increase over the current EDUs served. The projected EDU growth is added to the City's existing EDUs to calculate the total allocable units as part of the Hybrid Methodology applied in this Study.

3.3 FIRE RESCUE FACILITIES COST PER EDU

Once the Fire Rescue cost is determined and the allocable units are established, the Fire Rescue cost per EDU is calculated, which represents the Fire Rescue Impact Fee per EDU. Table 9 shows the calculation of the Fire Rescue cost per EDU. The cost recovery was set to 96.4% to recognize and avoid exceeding the statutory limit on impact increases of 50%.

Table 9 – Fire Rescue Impact Fee Calculation

Hybrid Method		
Existing Asset Cost (Net of Grant/Debt Funded Assets)	$	19,685,656
Expansionary CIP Cost	$	89,227,940
Total Asset Cost for Fee Calculation	**$**	**108,913,596**
Existing Capacity in EDUs		56,429
Projected Additional Capacity from CIP in EDUs		56,429
Total EDUs for Cost Apportionment		**112,859**
Cost Recovery [1]		96.4%
Fire Rescue Impact Fee per EDU	**$**	**930.00**

[1] Cost recovery was set to 96.4% because Florida State Statutes limits the increase of an impact fee to 50%.

3.4 FIRE RESCUE IMPACT FEE PER LAND USE

The impact fee is applied to each land use on a unit basis. The impact fee per unit is calculated by applying the EDU/Unit multiplier that was determined in Table 9. The calculation of each land use's impact fee per unit is featured in Table 10 on the following page.

Table 10 – Proposed Fire Rescue Impact Fee Per Land Use

Land Use	Fire Rescue Impact Fee per EDU	EDU Factor	Fire Rescue Impact Fee Per Unit	Unit Type
Single-Family	$930.00	1.000	**$930.00**	Dwelling Unit
Multi-Family	$930.00	0.750	**$698.00**	Dwelling Unit
Mobile Home	$930.00	0.610	**$567.00**	Dwelling Unit
Retail/Commercial	$930.00	1.150	**$1,070.00**	1,000 Square Feet
Industrial/Warehouse	$930.00	0.120	**$112.00**	1,000 Square Feet
Office/Institutional	$930.00	0.300	**$279.00**	1,000 Square Feet

[1] Rounded to the nearest whole dollar.

Table 11 shows a comparison of the proposed impact fees to the current impact fees.

Table 11 – Current and Proposed Fire Rescue Impact Fees

Land Use	Fire Rescue Impact Fee Per Unit	Current Fees	Change %
Single-Family	**$930.00**	$ 620.09	*50%*
Multi-Family	**$698.00**	$ 503.16	*39%*
Mobile Home	**$567.00**	$ 443.64	*28%*
Retail/Commercial	**$1,070.00**	$ 825.27	*30%*
Industrial/Warehouse	**$112.00**	$ 126.14	*-11%*
Office/Institutional	**$279.00**	$ 465.46	*-40%*

Florida Statue states that impact fee increases less than 25% must be implemented in two equal phases and an increase of up to 50% must be implemented in four equal phases. The Fire Rescue impact fee increases at varying degrees for each land use, however all of the increases are above 25% so they must be phased in over four years. The decreases in two land use categories reflect the updated non-residential functional population results, as shown in detail in Table 7 of this report and can be implemented in one year. Table 12 below displays the phase in schedule.

Table 12 – Proposed Phase In of Fire Rescue Impact Fees

Land Use	Calculated Change	Phase-In Time	Current Fee	Year 1	Year 2	Year 3	Year 4
Single-Family	50%	4 Years	$ 620.09	$ 698.00	$ 775.00	$ 853.00	$ 930.00
Multi-Family	39%	4 Years	$ 503.16	$ 552.00	$ 601.00	$ 649.00	$ 698.00
Mobile Home	28%	4 Years	$ 443.64	$ 474.00	$ 505.00	$ 536.00	$ 567.00
Retail/Commercial	30%	4 Years	$ 825.27	$ 886.00	$ 948.00	$ 1,009.00	$ 1,070.00
Industrial/Warehouse	-11%	1 Year	$ 126.14	$ 112.00	$ 112.00	$ 112.00	$ 112.00
Office/Institutional	-40%	1 Year	$ 465.46	$ 279.00	$ 279.00	$ 279.00	$ 279.00

4. POLICE IMPACT FEE CALCULATION

4.1 COST BASIS

City staff has provided the specific costs for original land purchase for police facilities, as well as the original purchase costs for all vehicles, equipment and facility construction within the Police Department. Vehicle, equipment and facility costs were escalated to current year costs to identify the estimated replacement cost new of each asset. Based upon Staff's documentation of the funding source for each purchase, existing assets funded by grant programs and donations were deducted from the cost basis. The Police Department has assembled a capital improvement plan which includes the expansion of the Main Station Communications Center in FY 2025, a Southern Expansion Police Station in FY 2026, and two new substations in FY 2028 and FY 2032, the study assumes that approximately 12% of the future cost will be funded through other contributions. The current replacement costs of all Police assets and the projected costs of expansion related capital are presented on a summary level below in Table 13, and detailed in Schedule 3 and Schedule 4 of the Appendix, respectively.

Another adjustment made to the calculation of the existing asset replacement cost involves subtracting the outstanding principal owed on debt obligations due to the burden placed on future tax payers by outstanding debt. The 2015 Sales Tax Refunding Bonds funded public safety projects and it was determined by City staff that 25% of the projects benefitted the Police Department. Subsequently, 25% of the outstanding principal was subtracted from the existing asset cost. Additionally, a portion of the outstanding principal amount related to a US Bancorp Public Safety Lease Purchase Agreement, which partially funded Police Department equipment, was subtracted.

Table 13 – Estimated Police Facilities Cost

Asset Category	Description		Cost
Land	Original Cost	$	3,500
Buildings	Replacement Cost New	$	12,878,507
Equipment	Replacement Cost New	$	888,191
Vehicles	Replacement Cost New	$	9,175,175
Total Existing Asset Cost		**$**	**22,945,373**
Less: Donated Assets		$	(111,884)
Less: Grant Funded Assets		$	(2,554,162)
Less: Outstanding Principal [1]		$	(494,835)
Net Existing Asset Cost		**$**	**19,784,492**
Plus: Expansionary CIP Costs		$	41,247,171
Less: Estimated Grant/Contributions [2]		$	(4,792,551)
Total Asset Cost for Fee Calculation		**$**	**56,239,112**

[1] Asset costs funded through debt issuances were excluded from the cost basis as they are funded by a dedicated future funding source supported by current and future tax dollars.

[2] Estimated grants for future capital spending based on the proportion of assets funded by grants in the existing asset base.

4.2 EQUIVALENT DWELLING UNITS

Different types of development must be translated into a common unit of measurement that reflects the impact of new development on the demand for Police services. The impact fees calculated in this report utilize a common service unit based on the "equivalent dwelling unit" or EDU, which represents the impact of a typical single-family detached dwelling. The Police impact fee calculations utilize the same capacity estimations expressed in EDUs as calculated in the Fire Rescue Impact Fee Section 3.2.

4.3 POLICE FACILITIES COST PER EDU

Once the Police facilities cost is determined and the allocable units are established, the Police cost per EDU is calculated, which represents the Police Impact Fee per EDU. The expanded capacity for growth from the planned capital improvements was estimated in terms of EDUs and added to the existing EDUs in order to achieve fair cost apportionment, based on the expected City capacity growth. As with Fire and Rescue, city staff agreed that the functional population to be serviced by the planned facilities was estimated to represent a 100% increase over the existing service population. Table 14 below shows the calculation of the Police cost per EDU.

Table 14 – Police Impact Fee Calculation

Hybrid Method		
Existing Asset Cost (Net of Grant/Debt Funded Assets)	$	19,784,492
Expansionary CIP Cost	$	36,454,620
Total Asset Cost for Fee Calculation	**$**	**56,239,112**
Existing Capacity in EDUs		56,429
Projected Additional Capacity from CIP in EDUs		56,429
Total EDUs for Cost Apportionment		**112,859**
Cost Recovery		100.0%
Police Impact Fee per EDU	**$**	**498.31**

4.4 POLICE IMPACT FEE PER LAND USE

The police impact fee is applied to each land use on a per unit basis. The impact fee per unit is calculated by applying the EDU/Unit multiplier that was determined by the functional population as calculated in Table 6 of this report. The calculation of the police impact fee per unit for each land use is featured in Table 15.

Table 15 – Proposed Police Impact Fee Per Land Use

Land Use	Police Impact Fee per EDU [1]	EDU Factor	Police Impact Fee Per Unit	Unit Type
Single-Family	$498.00	1.000	**$498.00**	Dwelling Unit
Multi-Family	$498.00	0.750	**$374.00**	Dwelling Unit
Mobile Home	$498.00	0.610	**$304.00**	Dwelling Unit
Retail/Commercial	$498.00	1.150	**$573.00**	1,000 Square Feet
Industrial/Warehouse	$498.00	0.120	**$60.00**	1,000 Square Feet
Office/Institutional	$498.00	0.300	**$149.00**	1,000 Square Feet

[1] Rounded to the nearest whole dollar.

Table 16 shows a comparison of the proposed impact fees to the current impact fees.

Table 16 – Current and Proposed Police Impact Fees

Land Use	Police Impact Fee Per Unit	Current Fees	Change %
Single-Family	**$498.00**	$ 398.15	*25%*
Multi-Family	**$374.00**	$ 323.07	*16%*
Mobile Home	**$304.00**	$ 284.86	*7%*
Retail/Commercial	**$573.00**	$ 529.90	*8%*
Industrial/Warehouse	**$60.00**	$ 80.99	*-26%*
Office/Institutional	**$149.00**	$ 298.87	*-50%*

Florida Statue states that impact fee increases of less than 25% must be implemented in two equal phases and an increase of up to 50% must be implemented in four equal phases. The Police impact fee increases vary for each land use and is at most 25% for single family, therefore can be phased in over 2 years. The decreases in two land use categories reflect the updated non-residential functional population results, as shown in detail in Table 7 of this report and can be implemented in one year. Table 17 below displays the suggested impact fee phase in schedule for police impact fees.

Table 17 – Proposed Phase In of Police Impact Fees

Land Use	Calculated Change	Phase-In Time	Current Fee	Year 1	Year 2	Year 3	Year 4
Single-Family	25%	2 Years	$ 398.15	$ 448.00	$ 498.00	$ 498.00	$ 498.00
Multi-Family	16%	2 Years	$ 323.07	$ 349.00	$ 374.00	$ 374.00	$ 374.00
Mobile Home	7%	2 Years	$ 284.86	$ 294.00	$ 304.00	$ 304.00	$ 304.00
Retail/Commercial	8%	2 Years	$ 529.90	$ 551.00	$ 573.00	$ 573.00	$ 573.00
Industrial/Warehouse	-26%	1 Year	$ 80.99	$ 60.00	$ 60.00	$ 60.00	$ 60.00
Office/Institutional	-50%	1 Year	$ 298.87	$ 149.00	$ 149.00	$ 149.00	$ 149.00

5. CONCLUSIONS & RECOMMENDATIONS

The fundamental conclusions and recommendations of the Fire Rescue and Police impact fee calculations are as follows:

Land Use	Fire Rescue Impact Fee Per Unit	Police Impact Fee Per Unit	Unit Type
Single-Family	$ 930.00	$ 498.00	Dwelling Unit
Multi-Family	$ 698.00	$ 374.00	Dwelling Unit
Mobile Home	$ 567.00	$ 304.00	Dwelling Unit
Retail/Commercial	$ 1,070.00	$ 573.00	1,000 Square Feet
Industrial/Warehouse	$ 112.00	$ 60.00	1,000 Square Feet
Office/Institutional	$ 279.00	$ 149.00	1,000 Square Feet

We recommend the City adopt the Fire Rescue and Police impact fees up to or below the 100% cost recovery levels identified herein to maximize the recovery of expansion-related capital costs from new customers while minimizing the burden of these capital costs to existing properties. We recommend the City adopt the phase-in schedules for each of the impact fees as outlined in this report to adhere to the statutory limitations on impact fee increases.

- Different adoption percentages could be applied to the two different fees but the percentage for each fee type should be applied uniformly to all land use types to retain the proportionality of the fees to the impact of various types of development.
- We recommend that the City update the Impact Fee calculations approximately every five years to reflect the most current data regarding assets, development/population and projected capital needs.

Disclaimer

This document was produced by Stantec Consulting Services Inc. ("Stantec") for the City of Palm Bay, Florida and is based on a specific scope agreed upon by both parties. In preparing this report, Stantec utilized information and data obtained from the City of Palm Bay Florida or public and/or industry sources. Stantec has relied on the information and data without independent verification, except only to the extent such verification is expressly described in this document. Any projections of future conditions presented in the document are not intended as predictions, as there may be differences between forecasted and actual results, and those differences may be material.

Additionally, the purpose of this document is to summarize Stantec's analysis and findings related to this project, and it is not intended to address all aspects that may surround the subject area. Therefore, this document may have limitations, assumptions, or reliance on data that are not readily apparent on the face of it. Moreover, the reader should understand that Stantec was called on to provide judgments on a variety of critical factors which are incapable of precise measurement. As such, the use of this document and its findings by the City of Palm Bay, Florida should only occur after consultation with Stantec, and any use of this document and findings by any other person is done so entirely at their own risk.
